Supplemental Figure 2. Kaplan Meier curves comparing outcomes of Pii risk men to D'Amico intermediate risk men with clinical stage T2b as their only intermediate risk feature. (A) Biochemical recurrence free survival, $p=0.0034$. (B) Metastasis free survival, $p=0.6849$. (C) Cancer-specific survival, $p=0.3296$.

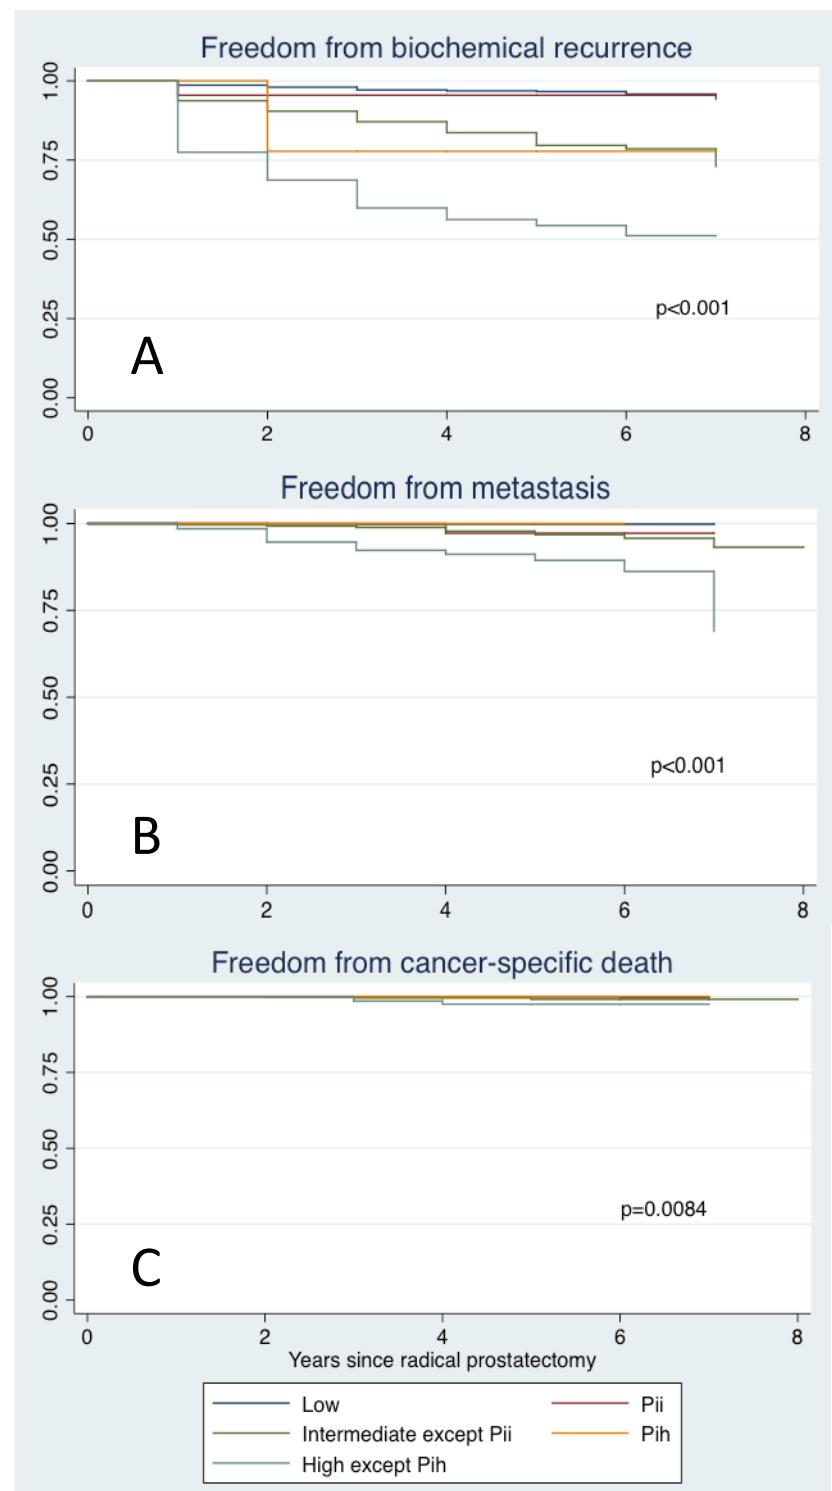

Supplemental Figure 3. Kaplan Meier curves comparing outcomes of Pih risk men to D'Amico high risk men with biopsy Gleason score 8-10 as their only high risk feature. (A) Biochemical recurrence free survival, p=0.0253. (B) Metastasis free survival, p=0.0131. (C) Cancer-specific survival, p=0.0234.

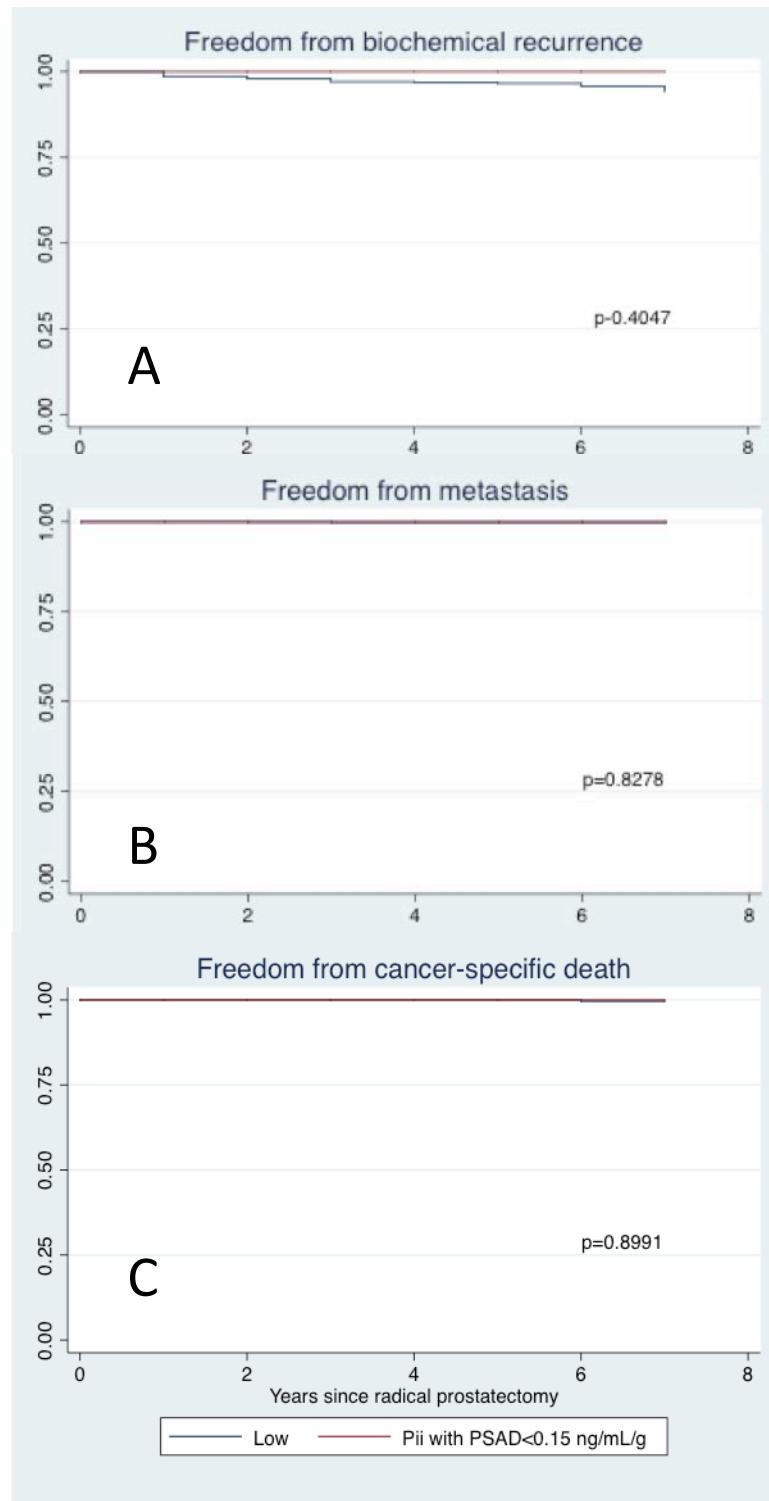

Supplemental Figure 4. Kaplan Meier curves comparing outcomes of Pih risk men to D'Amico high risk men with clinical stage $\geq T2c$ as their only high risk feature. (A) Biochemical recurrence free survival, $p=0.0061$. (B) Metastasis free survival, $p=0.4893$. (C) Cancer-specific survival, $p=0.7144$.

Supplemental Figure 5. Cancer-specific outcomes stratified by risk category for the 2005-2012 cohort. (A) Biochemical recurrence free survival, $p<0.001$ for all comparisons. (B) Metastasis free survival, <0.001 for all comparisons. (C) Cancer-specific survival, $p=0.008$ for all comparisons.

Supplemental Figure 6. Kaplan Meier curves comparing PSA-incongruent men from the 2005-2012 cohort having PSA density <0.15 ng/mL/g (Pii: n=46, Pih: n=0) to D'Amico low risk men. (A) Biochemical recurrence free survival, p=0.4047. (B) Metastasis free survival, p=0.8278. (C) Cancer-specific survival, p=0.8991.

Supplemental Table 1. Among the cohort of Pii or Pih men, stratified by PSAD <0.15 ng/mL/g or PSAD ≥0.15 ng/mL/g, univariate and multivariable hazard ratios predicting biochemical recurrence, metastasis, and prostate cancer-specific mortality.
