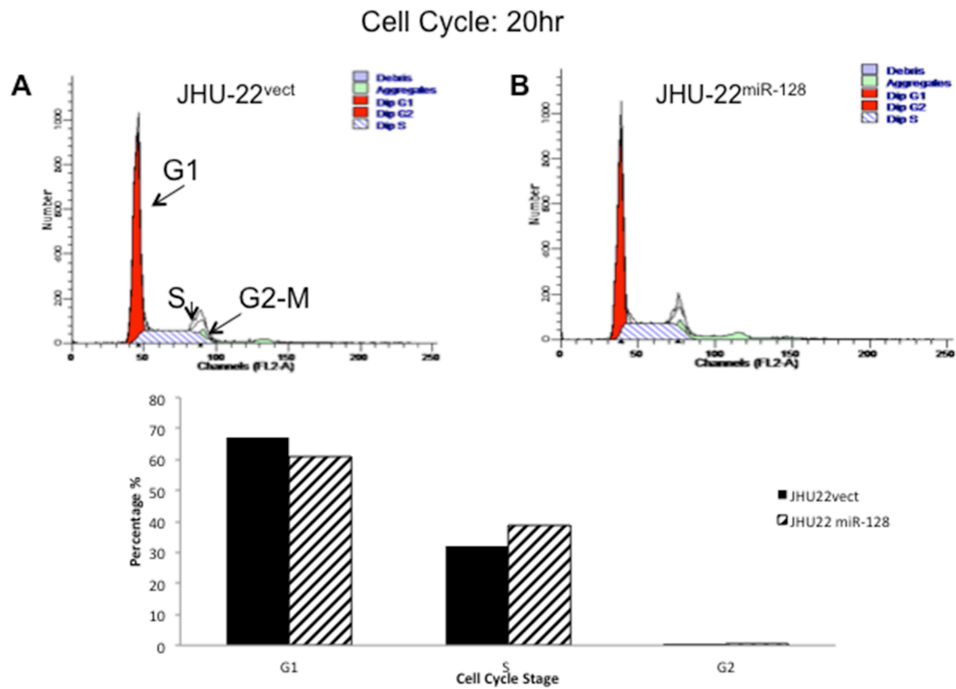

Figure S1.

Cell Cycle Analysis JHU-22^{vect} and JHU-22^{miR-128} Cell Lines 20hrs.

Cell cycle was analyzed by flow cytometry after cells were treated with FBS 20 hours. The distributions of cells in G1, S, and G2 phases are shown for JHU-22^{vect} (A) and (B) miRNA transfected JHU-22^{miR-128} cell lines. The results represent the mean \pm SD from independent experiments performed in triplicate.
