

Transport of organic anions and cations in murine embryonic kidney development and in serially-reaggregated engineered kidneys

Melanie L Lawrence, C-Hong Chang, Jamie A Davies^{*}
Centre for Integrative Physiology, The University of Edinburgh

Supplementary Figure S1

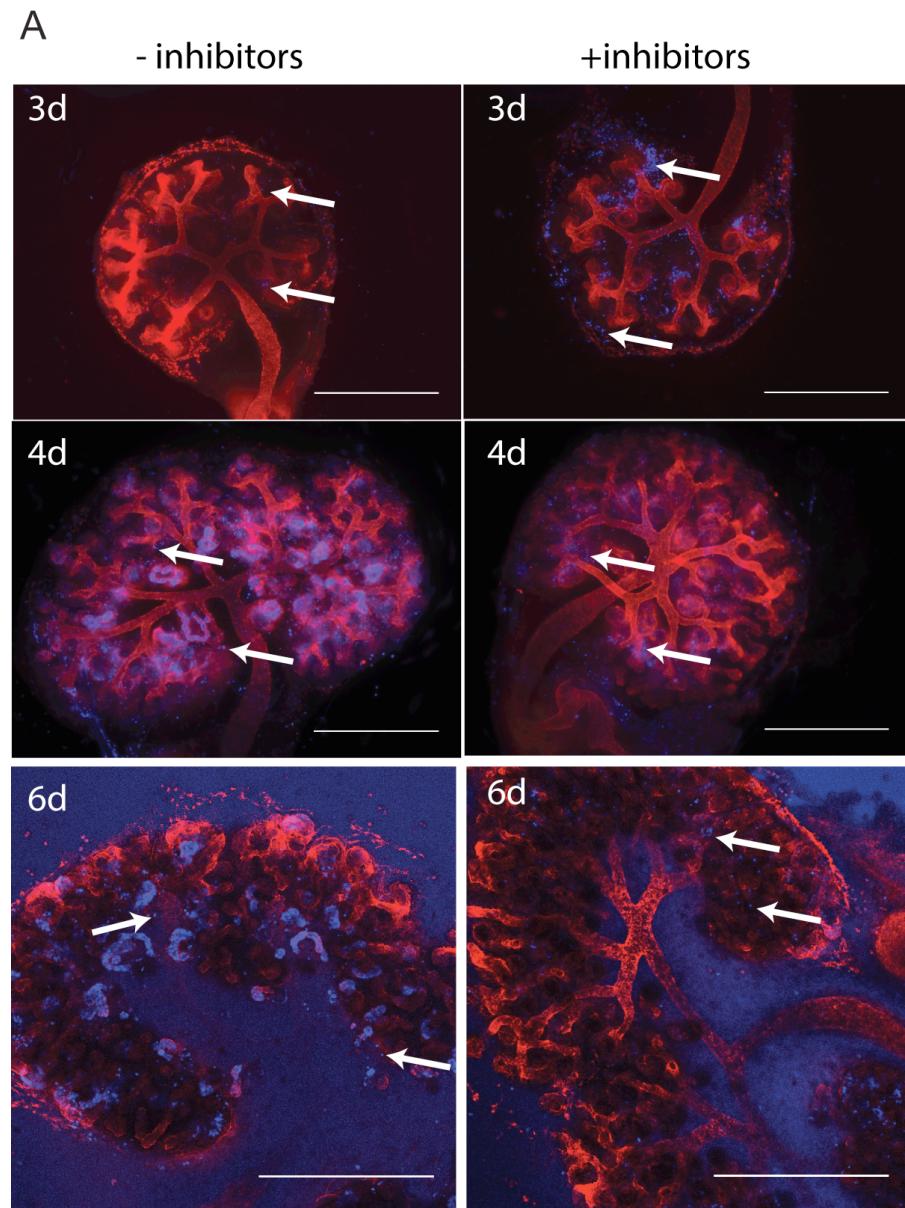

Figure S1. *DAPI-positive nuclei outside tubules in cultured embryonic kidneys*

(A) White arrows point to examples of DAPI-positive cells (blue) that are not inside tubules in live cultured kidneys, at 3 days, 4 days and 6 days in culture and both with and without inhibitor treatment. Scale bars represent 300um.
