

Help File for QSIM

- a. Recommended environments for software operation:
 - Computer operating systems: Windows 7 or 8, Mac OS X, and Linux
 - ImageJ versions: 1.49m or newer
- b. Because of Java and ImageJ version differences, in order to run QSIM, users need to compile “QSIM_.java” in ImageJ to generate a local “QSIM_.class” file as instructed below:
 - (1) Drop “QSIM_.java” file in the “plugins” folder of ImageJ.
 - (2) Open “QSIM_.java” in imageJ.
 - (3) In the newly opened “QSIM_.java” window, choose File → Compile and Run. This will generate a “QSIM_.class” file in the same folder.
 - (4) Restart ImageJ. Choose Plugins → QSIM.
