Zebrafish gene names and qRT-PCR primer sequences are listed accompanied with the ZFIN identification codes and the names of the orthologous genes in humans. HGNC, HUGO Gene Nomenclature Committee.

A**B**

Supplemental Figure 1. *furinA*^{td204e} mutation disrupts the transcription of exon 9.

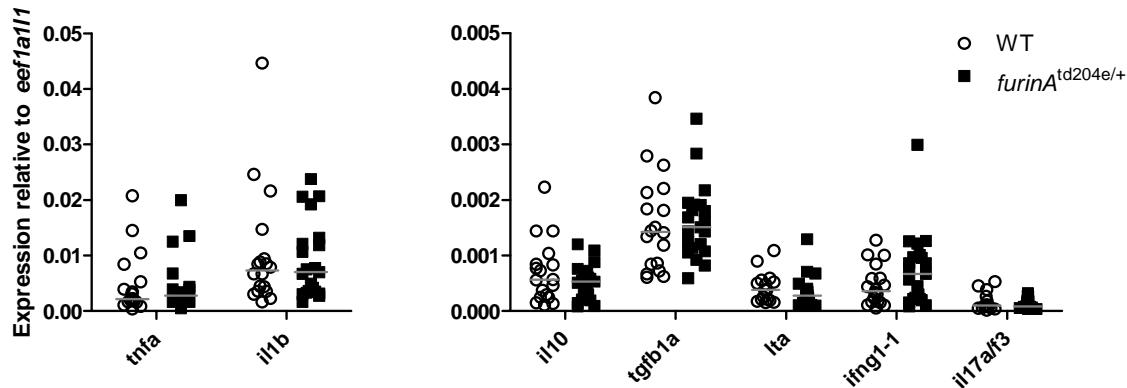

(A) A schematic presentation of the FURIN/FurinA domain structure and the catalytic amino acid residues (Asp153, His194, Asn295 and Ser 368), as well as the location of exon 9. (B) cDNA from both WT and *furinA*^{td204e/+} mutant zebrafish was used as a template in a standard PCR reaction with different primer pairs (F8=Forward primer in exon 8, R9=Reverse primer in exon 9, R10=Reverse primer in exon 10). PCR products were analyzed with agarose gel electrophoresis, which demonstrates the presence of a 64 bp band only in reactions containing cDNA from *furinA*^{td204e/+} mutants. The bands were excised and further verified by DNA sequencing (Data not shown).

Supplemental Figure 2. Comparison of the T cell marker gene expression and the innate cytokine response in *furinA*^{td204e/+} mutants and WT controls in an experimental low-dose mycobacterial infection at 4 wpi.

A latent mycobacterial infection was induced with a low-dose *M. marinum* inoculate. Relative expression of (A) Th cell marker genes (*cd247*, *tbx21*, *gata3*, *foxp3a*, *rorca*) as well as (B) pro-inflammatory cytokine genes (*tnfa*, *il1b*, *lta*, *ifng1-1*, *il17a/f3*) and anti-inflammatory cytokine genes (*il10*, *tgbf1a*) was determined in *furinA*^{td204e/+} (n=13-14) and WT (n=16-18) zebrafish with qRT-PCR at 4 wpi. Gene expressions were normalized to *eef1a11* expression and represented as a scatter dot plot and median. A two-tailed Mann-Whitney was used in the statistical comparison of differences.

Relative gene expression (9 wpi, low-dose)

Supplemental Figure 3. Comparison of the innate cytokine response in *furinA^{td204e/+}* mutants and WT controls in an experimental low-dose mycobacterial infection at 9 wpi.

A latent mycobacterial infection was induced with a low-dose *M. marinum* inoculate. Relative expression of pro-inflammatory cytokine genes (*tnfa*, *il1b*, *lta*, *ifng1-1*, *il17a/f3*) and anti-inflammatory cytokine genes (*il10*, *tgbf1a*) was determined in *furinA^{td204e/+}* (n=18-21) and WT (n=16-18) zebrafish with qRT-PCR at 9 wpi. Gene expressions were normalized to *eef1a111* expression and represented as a scatter dot plot and median. A two-tailed Mann-Whitney was used in the statistical comparison of differences.
