

S2\_Table. Number (and percentage) of microsatellite types based on the size of the repeat motif.

Repeat Size	SSR isolation and primer design		
	% of each motif SSR identified (%)	Potentially amplificably loci (%)	Loci primers designed (%)
Dinucleotide	19 (6.60)	8 (7.77)	8 (8.60)
Trinucleotide	109 (37.85)	41 (39.81)	39 (41.94)
Tetranucleotide	114 (39.58)	45 (43.69)	43 (46.24)
Pentanucleotide	46 (15.97)	9 (8.74)	4 (4.30)
Hexanucleotide	-	-	-
<b>TOTAL</b>	<b>288</b>	<b>103</b>	<b>93</b>
