

Figure S2: Expression of JA biosynthesis genes in peach flowers. The expression of two JA-biosynthesis genes, *PpLOX3* (a) and *PpOPR3* (b) were quantified in flowers of showy and non-showy varieties at 0% (Stage II) and at 100 % anther dehiscence (Stage V). The expression of each gene was normalized to that of *Ppactin*. Values are the mean and standard error of three biological replicates. Means in each column having the same letter are not significantly different ($P < 0.05$, Tukey-Kramer HSD test).
