

Supplementary Figure 1. Clinical comparisons of animals infected with CA/09-PA NLuc or parental rgCA/09 influenza virus. Eight-week-old male ferrets were lightly anesthetized and intranasally inoculated with 10^5 TCID₅₀ CA/09-PA NLuc or rgCA/09 virus. CA/09-PA NLuc infected animals did not show significant (a) weight loss or (b) body temperature increase. Data represents 9 animals (5 donor, 2 direct contact, 2 respiratory contact). Each line represents an individual animal. Similarly, parental rgCA/09 infected animals did not show significant (c) weight loss or (d) body temperature increase. Data represents 5 animals (2 donor, 2 direct contact, 1 respiratory contact). Each line represents an individual animal.
