

Supplemental Information

Elevated CO₂ shifts the functional structure and metabolic potentials of soil microbial communities in a C₄ agroecosystem

Jinbo Xiong, Zhili He, Shengjing Shi, Angela Kent, Ye Deng, Liyou Wu, Joy D. Van Nostrand, and Jizhong Zhou

A. Supplemental Tables

Table S1 Quantitatively evaluates the effects of eCO₂ and soil depths on the functional gene categories by parametric permutational multivariate analysis of variance (perMANOVA)

Table S2 The correlation of functional process involved in soil C and N dynamics with soil variables by Mantel test

Table S3 P values of correlations between soil properties and signal intensities of functional genes by Mantel tests

B. Supplemental Figures

Figure S1 Non-metric multidimensional scaling (NMDS) analysis of elevated CO₂ (eCO₂) and ambient CO₂ (aCO₂) samples

Figure S2 The normalized signal intensity of the detected key gene families involved in CO₂ fixation

Figure S3 The normalized signal intensity of the detected key gene families involved in CH₄ cycling

Figure S4 The abundance of detected key genes involved in P utilization.

33 **Table S1** Quantitatively evaluates the effects of eCO₂ and soil depths on the functional gene
 34 categories by parametric permutational multivariate analysis of variance (perMANOVA). R²
 35 value is the constrained proportion of the parameter.

Gene category	eCO ₂		Depth		eCO ₂ :Depth	
	R ²	P	R ²	P	R ²	P
C fixation	0.105	0.001	0.056	0.008	0.036	0.055
C degradation	0.116	0.001	0.054	0.002	0.031	0.068
N fixation	0.102	0.001	0.048	0.011	0.033	0.067
Nitrification	0.056	0.009	0.067	0.007	0.061	0.005
Denitrification	0.129	0.001	0.054	0.009	0.037	0.039
Assimilatory N reduction	0.104	0.001	0.046	0.018	0.063	0.002
Dissimilatory N reduction	0.131	0.001	0.052	0.016	0.037	0.059
Ammonification	0.093	0.001	0.056	0.001	0.033	0.043
P utilization	0.128	0.001	0.048	0.017	0.04	0.023
CH ₄ production	0.127	0.001	0.085	0.001	0.061	0.003
CH ₄ oxidation	0.094	0.001	0.048	0.007	0.031	0.097

36

37 **Table S2** The correlation of functional process involved in soil C and N dynamics with soil
 38 variables by Mantel test.

Functional category	TN [§]		TC	
	r	p	r	p
C fixation	0.074	0.137	-0.017	0.481
C degradation	0.08	0.133	0.032	0.266
N fixation	0.146	0.024	0.141	0.051
Nitrification	0.183	0.012	0.201	0.031
Denitrification	0.057	0.192	-0.016	0.487
Ammonification	0.076	0.175	-0.03	0.534
Assimilatory N reduction	0.046	0.235	0.016	0.343
Dissimilatory N reduction	0.067	0.146	-0.043	0.687
CH ₄ production	0.105	0.111	-0.116	0.894
CH ₄ oxidation	0.166	0.049	0.037	0.294
P utilization	0.074	0.113	0.028	0.304
S cycling	0.067	0.151	0.016	0.336

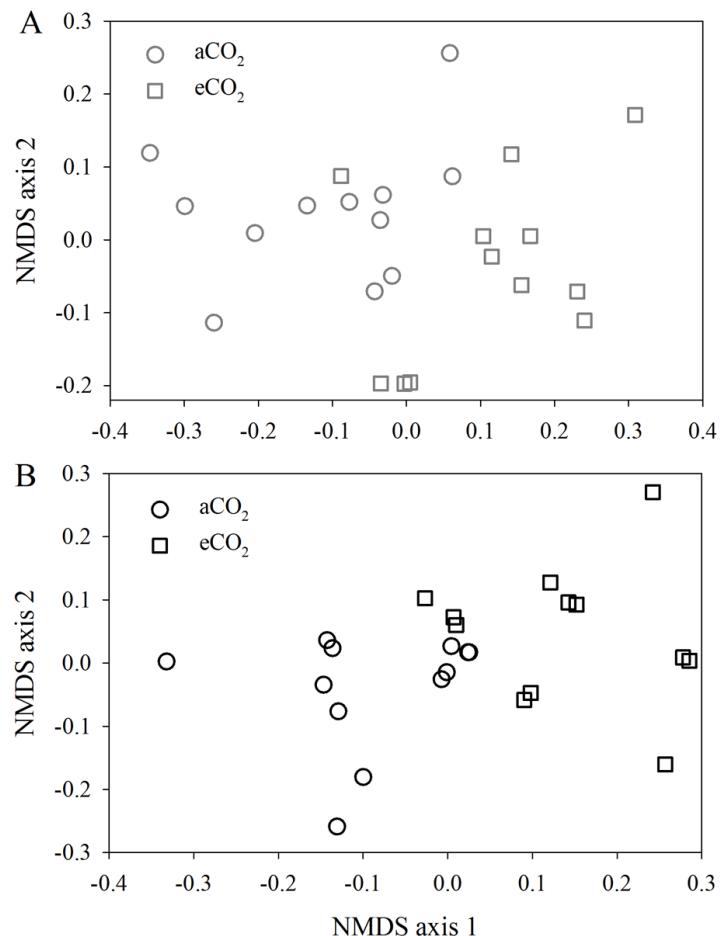

39
 40 [§]:The other soil variables, including NO₃⁻, NH₄⁺, C:N ratio and corn yield that showed no
 41 significant trends to any functional processes are not represented in this table.

42 **Table S3** *P* values of correlations between soil properties and signal intensities of functional
 43 genes by Mantel test. Bold face indicates significantly changed *P* values (*P* < 0.05).

44

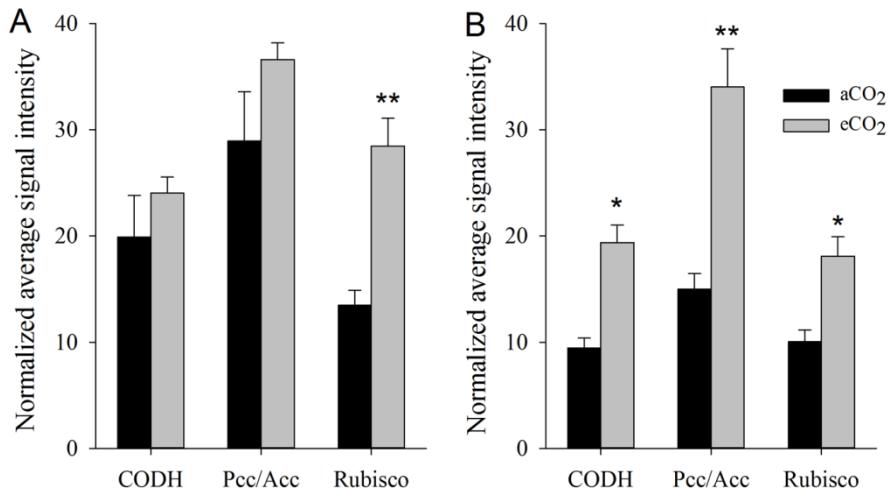

45

46
47

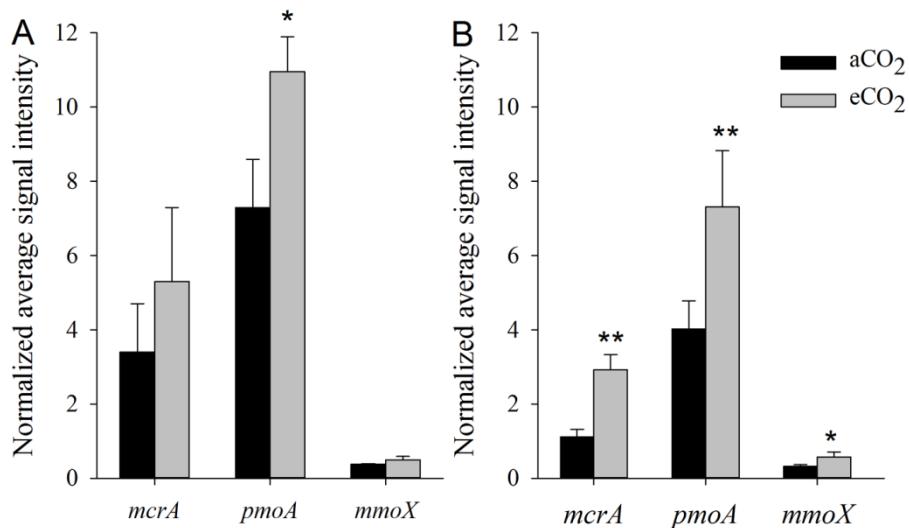

48 **Figure S1** Non-metric multidimensional scaling (NMDS) analysis of elevated CO₂ (eCO₂)
 49 and ambient CO₂ (aCO₂) samples at the depths of 0-5 cm (A) and the 5-15 cm (B) based on
 50 the Bray–Curtis values of GeoChip detected *gyrB* gene.

51
52

53 **Figure S2** The normalized signal intensity of the detected key gene families involved in CO₂
54 fixation. Rubisco: ribulosel, 5-bisphosphate carboxylase/oxygenase; CODH: carbon
55 monoxide dehydrogenase; Pcc/Acc: propionyl-CoA/acetyl-CoA carboxylase. Data are
56 presented as mean ± SE (standard error, n = 12). *: P < 0.05; **: P < 0.01 based on t-test
57 between elevated CO₂ (eCO₂) and ambient CO₂ (aCO₂) samples in the soil depths of 0-5 cm
58 (A) and 5-15 cm (B).

59
60

61 **Figure S3** The normalized signal intensity of the detected key gene families involved in CH₄
62 cycling. *mcrA*: the alpha-subunit of methyl coenzyme M reductase for methane production;
63 *pmoA*: particulate methane monooxygenase, and *mmoX*: methane monooxygenase for
64 methane consumption. Data are presented as mean \pm SE (standard error, n = 12). *: P < 0.05;
65 **: P < 0.01 based on t-test between elevated CO₂ (eCO₂) and ambient CO₂ (aCO₂) samples
66 in the soil depth of 0-5 cm (A) and 5-15 cm (B).

67
68

69 **Figure S4** The abundance of detected key genes involved in P utilization in the soil depth of
70 0-5 cm (A) and 5-15 cm (B). Ppx, exopolyphosphatase for inorganic polyphosphate
71 degradation; Ppk, polyphosphate kinase for polyphosphate biosynthesis in prokaryotes; and
72 phytase for phytate degradation. Data are presented as mean \pm SE. *: $P < 0.05$; **: $P < 0.01$
73 based on the Student t-test.
