

Supplementary Data

SUPPLEMENTARY FIG. S1. Vector copy analysis. **(A)** Quantitation of selected Western blot images from Fig. 3 was performed based on 50 ng of a PCCA protein standard. **(B)** Twenty-five days after IV administration of 5×10^{11} vg of AAV-PCCAcO, livers were removed from male and female *Pcca*^{-/-}(A138T) mice. DNA was isolated and qPCR specific for PCCAcO transgene and a mouse transferrin receptor (Tfrc) reference gene was performed for data normalization.
