

S1 Figure. Quantitative real-time RT-PCR analysis. No significant changes in the gene expression of sarcoplasmic reticulum Ca^{2+} -ATPase, muscle (SERCA2, $p = 0.7$), calsequestrin-2 (CASQ2, $p = 0.7$), ryanodine receptor 2 (RYR2, $p = 0.8$), and connexin-43 (cnx43, $p = 0.2$) were observed between control and DEHP-treated samples ($n = 3$).
