

Supplemental Figure Legend

Figure 1. Detection of PCSK9 protein levels in liver homogenates. Equal amounts of homogenate proteins of individual liver samples of Ad-shHNF1 α and Ad-shLacZ infected mice were resolved by SDS-PAGE. PCSK9 protein was detected by immunoblotting using anti-PCSK9 antibody. The membrane was reprobbed with anti- β -actin antibody. Values are the mean \pm SEM of six samples per group.
