

SUPPLEMENTARY FIG. S4. Transfection of HUAEC with Nox5-specific siRNA. Gene silencing was performed in HUAECs using either control- or Nox5-specific siRNA. After 48 h, protein expression of Nox5 was determined by immunoblot to assess silencing efficiency. Results (mean \pm SEM of $n=5$ independent experiments) are expressed relative to β -actin. A representative blot is shown. $^{++}p < 0.01$ relative to values in control siRNA-transfected cells.
