

Figure S2

Figure S2. Chloro inhibits Ca²⁺ sparks. Ca²⁺ sparks from 8 cells were measured as described in Figure 2A. **(A)** The frequency and **(B)** amplitude were markedly inhibited by 0.1 mM chloro. * denotes $p < 0.05$; *** denotes $p < 0.001$. These experiments demonstrate that low concentrations of chloro do not completely block, but rather inhibit RyRs.
