

Divergence between a_1 and a_2 alleles

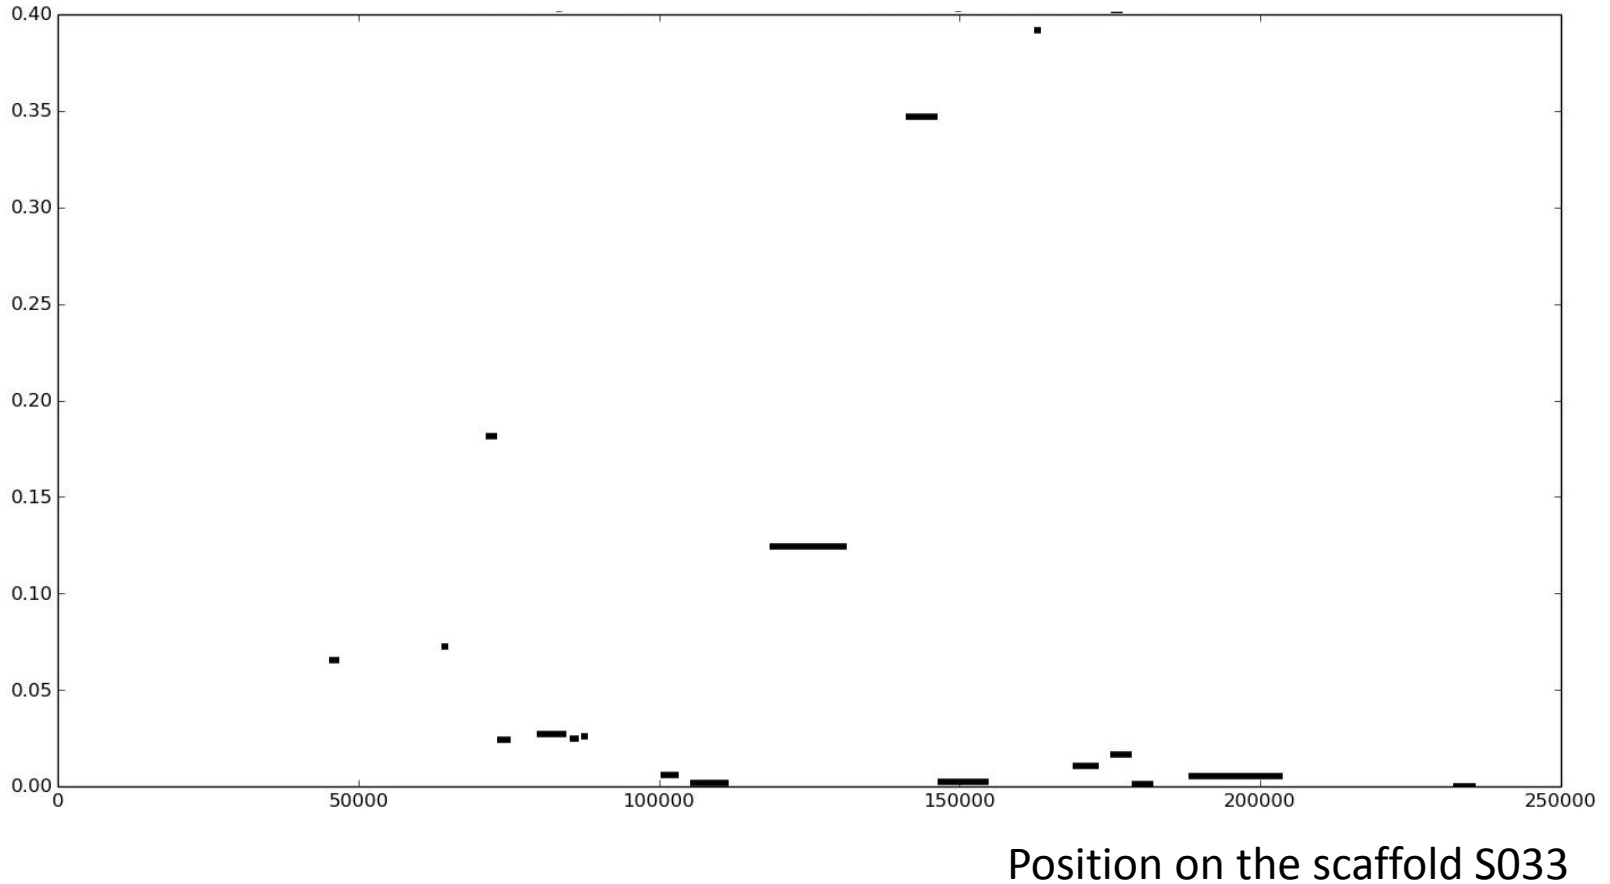

Figure S2. Heterogeneity of synonymous divergence between the a_1 and a_2 alleles of the mating-type chromosomes in their non-recombining regions (NRRs). Example of a scaffold (S033) in the NRRs with heterogeneity of synonymous divergence between the a_1 and a_2 alleles of *Microbotryum lychnidis-dioicae* exons (non transposable elements). The raw divergence is shown for alignable fragments of more than 1000 bp along the physical length of the scaffold.
