p < <sup>5</sup>				0.0172		0.0007	

<sup>1</sup> Per centage of positive tumor cells

<sup>2</sup> Average staining intensity - 0, 1, 2, or 3

<sup>3</sup> Product of positive tumor cells X intensity, normalized to the maximal value of 300.

<sup>4</sup> Cytoplasmic staining in a significant fraction of tumor cells. Case 15 had only cytoplasmic staining and three others had membrane and cytoplasmic staining.

<sup>5</sup> Comparison Intraductal and Invasive Carcinoma; Student's T-test, one-tailed, equal variance
