

## **S1 New section within *Calophaca***

Section *Trichomeae* M.L. Zhang stat. nov.

With dense glandular trichomes on the standard, peduncle, calyx, ovary, style, and legume. Stipules longer, seeds elliptical.

Type: *C. sinica* Rehd.

This section has only one species, endemic to the Taihangshan and Lüliangshan Mountains of Shanxi Province and the southern Yinshan Mountains of Inner Mongolia, occurring in forest and shrubland, altitude 900-1400 m. In Inner Mongolia, the habitats have been destroyed on a tremendous scale, thus, this species is regarded as rare and endangered and to be conserved in China.
