

Figure S4: Transcript profiling of OsPIN family genes in response to auxin and cytokinin treatment by qRT-PCR. Seedlings of 1 - 4 weeks were subjected to $1\mu\text{M}$ auxin and $1\mu\text{M}$ cytokinin treatments in $\frac{1}{2}$ MS media. Expression level of untreated samples was taken as the baseline and all values shown are respective to baseline. Error bars indicate standard deviation of three independent experiments.
