Reporting Checklist for Nature Neuroscience

This checklist is used to ensure good reporting standards and to improve the reproducibility of published results. For more information, please read Reporting Life Sciences Research.

Please note that in the event of publication, it is mandatory that authors include all relevant methodological and statistical information in the manuscript.

▶ Statistics reporting, by figure

- Please specify the following information for each panel reporting quantitative data, and where each item is reported (section, e.g. Results, & paragraph number).
- Each figure legend should ideally contain an exact sample size (n) for each experimental group/condition, where n is an exact number and not a range, a clear definition of how n is defined (for example x cells from x slices from x animals from x litters, collected over x days), a description of the statistical test used, the results of the tests, any descriptive statistics and clearly defined error bars if applicable.
- · For any experiments using custom statistics, please indicate the test used and stats obtained for each experiment.
- Each figure legend should include a statement of how many times the experiment shown was replicated in the lab; the details of sample collection should be sufficiently clear so that the replicability of the experiment is obvious to the reader.
- For experiments reported in the text but not in the figures, please use the paragraph number instead of the figure number.

Note: Mean and standard deviation are not appropriate on small samples, and plotting independent data points is usually more informative. When technical replicates are reported, error and significance measures reflect the experimental variability and not the variability of the biological process; it is misleading not to state this clearly.

▶ Representative figures

1.	Are any representative images shown (including Western blots and
	immunohistochemistry/staining) in the paper?

If so, what figure(s)?

2. For each representative image, is there a clear statement of how many times this experiment was successfully repeated and a discussion of any limitations in repeatability?

If so, where is this reported (section, paragraph #)?

NA

No.

▶ Statistics and general methods

1. Is there a justification of the sample size?

If so, how was it justified?

Where (section, paragraph #)?

Even if no sample size calculation was performed, authors should report why the sample size is adequate to measure their effect size.

Are statistical tests justified as appropriate for every figure?Where (section, paragraph #)?

NA

Sequencing and gene expression studies were not conducted by us.

Yes. Details of statistical tests conducted can be found in the respective results paragraphs and methods section of the manuscript.

	a.	the methods, is the statistical test for each experiment clearly defined?	Yes, tests are clearly when indicated when mentioned in the results section of the manuscript.
	b.	Do the data meet the assumptions of the specific statistical test you chose (e.g. normality for a parametric test)?	Yes. Methods section discusses details of statistical tests.
		Where is this described (section, paragraph #)?	
	C.	Is there any estimate of variance within each group of data?	Yes, SE/SEM provided when appropriate.
		Is the variance similar between groups that are being statistically compared?	
		Where is this described (section, paragraph #)?	
	d.	Are tests specified as one- or two-sided?	Yes.
	e.	Are there adjustments for multiple comparisons?	Yes, Bonferroni method for example were used.
3.	Are crite	ria for excluding data points reported?	Yes. CNV exclusion described in methods section.
	Was this	criterion established prior to data collection?	
	Where is	this described (section, paragraph #)?	
4.		ne method of randomization used to assign subjects (or to the experimental groups and to collect and process data.	NA
	If no ran	domization was used, state so.	
	Where d	oes this appear (section, paragraph #)?	
5.		ement of the extent to which investigator knew the group n during the experiment and in assessing outcome included?	NA
	If no blin	ding was done, state so.	
	Where (s	section, paragraph #)?	
6.		riments in live vertebrates, is a statement of compliance with uidelines/regulations included?	NA
	Where (s	section, paragraph #)?	
7.	Is the sp	ecies of the animals used reported?	NA
	Where (s	section, paragraph #)?	
8.		rain of the animals (including background strains of KO/ic animals used) reported?	NA
	Where (s	section, paragraph #)?	
9.	Is the se	x of the animals/subjects used reported?	NA
	Where (s	section, paragraph #)?	

10. Is the age of the animals/subjects reported?	NA
Where (section, paragraph #)?	
11. For animals housed in a vivarium, is the light/dark cycle reported?	NA
Where (section, paragraph #)?	
12. For animals housed in a vivarium, is the housing group (i.e. number of animals per cage) reported?	NA
Where (section, paragraph #)?	
13. For behavioral experiments, is the time of day reported (e.g. light or	NA
dark cycle)?	
Where (section, paragraph #)?	
14. Is the previous history of the animals/subjects (e.g. prior drug	NA
administration, surgery, behavioral testing) reported?	
Where (section, paragraph #)?	
a. If multiple behavioral tests were conducted in the same	NA
group of animals, is this reported?	
Where (section, paragraph #)?	
15. If any animals/subjects were excluded from analysis, is this reported?	NA
Where (section, paragraph #)?	
a. How were the criteria for exclusion defined?	NA
Where is this described (section, paragraph #)?	
 Specify reasons for any discrepancy between the number of animals at the beginning and end of the study. 	NA
Where is this described (section, paragraph #)?	
where is and described (section, paragraph π_f :	
Paggants	
Reagents	
Have antibodies been validated for use in the system under study (25524 and 57625) (25524 and 57625)	NA
(assay and species)?	
a. Is antibody catalog number given?	NA
Where does this appear (section, paragraph #)?	

b.	Where were the validation data reported (citation, supplementary information, Antibodypedia)?	NA
	Where does this appear (section, paragraph #)?	
	es were used to reflect the properties of a particular tissue or state, is their source identified?	NA
Where (section, paragraph #)?	
a.	Were they recently authenticated?	NA
	Where is this information reported (section, paragraph #)?	

Data deposition

Data deposition in a public repository is mandatory for:

- a. Protein, DNA and RNA sequences
- b. Macromolecular structures
- c. Crystallographic data for small molecules
- d. Microarray data

Deposition is strongly recommended for many other datasets for which structured public repositories exist; more details on our data policy are available here. We encourage the provision of other source data in supplementary information or in unstructured repositories such as Figshare and Dryad.

We encourage publication of Data Descriptors (see Scientific Data) to maximize data reuse.

Are accession codes for deposit dates provided?
 Where (section, paragraph #)?

NA, no data gathered.

▶ Computer code/software

Any custom algorithm/software that is central to the methods must be supplied by the authors in a usable and readable form for readers at the time of publication. However, referees may ask for this information at any time during the review process.

1. Identify all custom software or scripts that were required to conduct the study and where in the procedures each was used.

NETBAG search algorithm was used to determine the ASD network.

If computer code was used to generate results that are central to the
paper's conclusions, include a statement in the Methods section
under "Code availability" to indicate whether and how the code can
be accessed. Include version information as necessary and any
restrictions on availability.

Academic readers will be granted free access to the software after contacting the corresponding author and obtaining a university license.

▶ Human subjects

1. Which IRB approved the protocol?

NA

Where is this stated (section, paragraph #)?

2.	Is demographic information on all subjects provided?	NA
	Where (section, paragraph #)?	
3.	Is the number of human subjects, their age and sex clearly defined?	NA
	Where (section, paragraph #)?	
1	Are the inclusion and exclusion criteria (if any) clearly specified?	NA
4.		IVA
	Where (section, paragraph #)?	
5.	How well were the groups matched?	NA
	Where is this information described (section, paragraph #)?	
6.	Is a statement included confirming that informed consent was obtained from all subjects?	NA
	Where (section, paragraph #)?	
7.	For publication of patient photos, is a statement included confirming that consent to publish was obtained?	NA
	Where (section, paragraph #)?
