

S6 Fig.

Growth of *V. cholerae* mutants in reconditioned spent culture medium.

Bacterial growth was measured by OD₆₀₀ every 30 minutes. Black curves indicate growth in fresh medium. Blue curves indicate growth in the presence of reconditioned spent medium harvested from the wild-type. Red curves indicate growth in the presence of reconditioned spent medium harvested from the $\Delta cqsA \Delta luxS$ double synthase mutant.
