

Supplemental Figure 1. Age distribution of subjects 18 years and younger with positive test for *Bordetella pertussis*.

Horizontal bars indicate CDC-suggested vaccination intervals.

Supplemental Figure 2. Age distribution (as percent of total for each group) of pertussis cases reported to the CDC from 1997-2000¹ (red) in comparison to age distribution of subjects in the current study with positive *Bordetella pertussis* PCR results in 2012 (blue).
