

Figure S1. MOG-specific cytokine response on day 14 EAE. Draining LN from WT and CD1d^{-/-} mice given control or 1,25D3 diet were isolated on day 14 of EAE and cultured *in vitro* with 20µg/mL MOG peptide. IL-10 levels were determined by ELISA. * p < 0.05, ** p < 0.01 by ANOVA-based Tukey test, 1 representative of 2 experiments, n = 4-5.
