

Figure S2. iNKT cell production of IL-4 during EAE. Representative flow gating of TCR β^+ CD1d- α -GalCer tetramer $^+$ cells from the spleens of Ctrl-treated or 1,25D3-treated mice on day 8 of EAE. Cells were stimulated *ex vivo* with PMA and ionomycin for 4 hours with monensin for the final 3 hours and cells were stained intracellularly for IL-4.
