

Supplemental - Figure S3. Annual sap-flow ($\text{kg cm}^{-2} \text{ yr}^{-1}$, plot mean) by species and treatment across the 2008 through 2012 period. Annual sap-flow estimates were based on measurements from one replicate block ($n=1$) in years 2008 and 2009, and all replicate blocks ($n=3$) in years 2010 through 2012. For years 2010-2012, error bars (± 1 S.E.) represent the variation between plot means (by treatment).
