

Supplemental - Figure S9. Relationship between k_s and predawn water potential (Ψ_{PD}) across the 5+ yr study period for each species and treatment (panel A). Response of $\Delta\Psi$ ($\Psi_{PD} - \Psi_{MD}$) to plant water stress (Ψ_{PD}) across the study period (panel B). Values are mean \pm 1 S.E. Regression fits are the best fit relationship using a two parameter exponential function of the form; $y = ae^{bx}$.
