

LNT	Quadratic	Linear- quadratic	Linear- exponential	Linear- threshold	Step
-7.4	-8.9	-10.1	-7.5	-10.9	-12.3

Table S2. Deviances for different ERR models of the dose response for stroke incidence, each modified by a decreasing step in age attained. The deviance is presented as the difference from the baseline's deviance. No time lagging was applied. Models that passed the likelihood-ratio test are marked bold.
