

Supplementary Fig. S1: Quantitation of *CXCR4* mRNA by real-time PCR in PC-3 cells after 6-or 12-hour treatment with DMSO (control) or the indicated ITC compound (2.5 or 5 $\mu\text{mol/L}$). Results shown are mean \pm SD ($n = 6$). ^aSignificantly different ($P < 0.05$) compared with DMSO-treated control by one-way ANOVA with Dunnett's adjustment. Each experiment was repeated at least twice.
