

## Supplementary Information

**Figure S1.** Arrhenius plots of the primary KIEs on the proton abstraction (**A**) catalyzed by WT [16] (blue) and Y209W (red) TSase and the hydride transfer (**B**) catalyzed by the WT [25] (blue) and Y209W [15] (red) TSase. The lines represent the least-squares nonlinear regression of the intrinsic KIEs to Equation (5) in the main text. The empty circles represent the observed KIEs, and filled circles represent the  $KIE_{intS}$ . (**B**) is adapted from [15] with permission from ACS.

### Analysis of Products in the Proton Abstraction Step

We used an Agilent Technologies model 1100 HPLC system with a Supelco Discovery® C18 reverse phase column.

HPLC mobile phase solutions: A = 20 mM TEAA buffer (pH = 5.0); B = Acetonitrile.

**Table S1.** HPLC mobile phase gradient (flow rate 0.8 mL/min).

Time (min)	% A	% B
0	100	0
5	99.5	0.5
20	99	1
25	90	10
30	50	50
35	50	50

**Table S2.** KIE on the proton transfer catalyzed by Y209W.
