

Figure S1. Charge mutant strains are expressed similarly to wild-type Myo2p and affect Sec15p binding and localization as expected. (A) Myo2p expression levels in wild-type, *myo2-3DR*, *myo2-REKE*, and *myo2-3DR-REKE* strains. The glucose-6-phosphate dehydrogenase Zwf1p was used as a loading control. (B) Yeast two-hybrid interactions of Myo2p or Myo2-REKEp coiled-coil + tail regions (residues 925–1575) fused to the activation domain (AD), with Sec4ΔCC or Sec15p fused to the binding domain (BD). Sec4p is truncated to remove the C-terminal CXC motif to prevent prenylation. 1:10 serial dilutions were spotted on double-dropout (DDO) SD-Leu-Trp media as a control or triple dropout (TDO) SD-Leu-Trp-His media to test the interaction. Wild-type and Myo2-REKEp cctail constructs can bind to Sec4p, but the Myo2-REKEp cctail is deficient in Sec15p binding. (C) Sec15-GFP localization in wild-type and *myo2-3DR-REKE* strains. Bar, 5 μ m.

Table S1. Summary of yeast strains

Strain	Alias	Genotype	Source
ABY1655	BY4741	MAT α <i>his3Δ1 leu2Δ0 met15Δ0 ura3Δ0</i>	C. Boone ^a
