

Figure S3

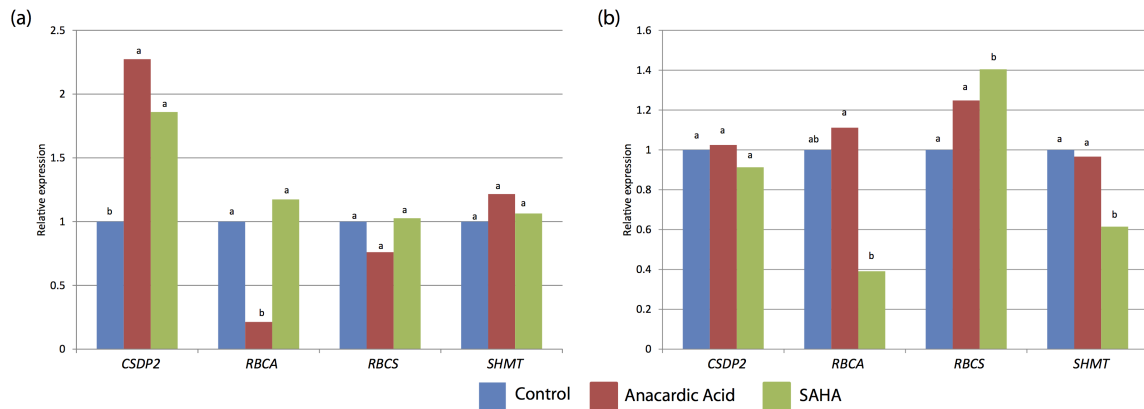

Figure S3: Analysis of the Relative Quantity (RQ) of PrCSDP2, PrRBCA, PrRBCS, and PrSHMT4 expression levels in (a) *P. radiata* calli and (b) needles after co cultivation with AnAc and SAHA. Expression levels were normalized to values in controls (untreated calli or needles). Different letters indicate significant differences between developmental stages (Tukey HSD test; $p < 0.05$).
