| Exploratory Model Selection |                          |      |       |       |
|-----------------------------|--------------------------|------|-------|-------|
| Constant Routine            |                          |      |       |       |
| Model                       | GM-CSF                   | IL-8 | MCP-1 | TNF-α |
| 1                           | 62.5                     | 46.2 | 38.5  | 30.8  |
| 2                           | 0.0                      | 15.4 | 30.8  | 7.7   |
| 3                           | 25.0                     | 30.8 | 30.8  | 30.8  |
| 4                           | 12.5                     | 7.7  | 0.0   | 30.8  |
| Baseline                    |                          |      |       |       |
| Model                       | GM-CSF                   | IL-8 | MCP-1 | TNF-α |
| 1                           | 33.3                     | 18.2 | 18.2  | 0.0   |
| 2                           | 16.7                     | 0.0  | 27.3  | 0.0   |
| 3                           | 16.7                     | 63.6 | 27.3  | 72.7  |
| 4                           | 33.3                     | 18.2 | 27.3  | 27.3  |
|                             |                          |      |       |       |
| Model 1                     | Single Harmonic          |      |       |       |
| Model 2                     | Single Harmonic + Linear |      |       |       |
| Model 3                     | Dual Harmonic            |      |       |       |
| Model 4                     | Dual Harmonic + Linear   |      |       |       |
| Final Model Selection       |                          |      |       |       |
| Constant Routine            |                          |      |       |       |
| Model                       | GM-CSF                   | IL-8 | MCP-1 | TNF-α |
| 1                           | 62.5                     | 69.2 | 61.5  | 38.5  |
| 2                           | 37.5                     | 30.8 | 38.5  | 61.5  |
| Baseline                    |                          |      |       |       |
| Model                       | GM-CSF                   | IL-8 | MCP-1 | TNF-a |
| 1                           | 50.0                     | 45.5 | 36.4  | 36.4  |
| 2                           | 50.0                     | 54.6 | 63.6  | 63.6  |
|                             |                          |      |       |       |
| Model 1                     | Single Harmonic          |      |       |       |
| Model 2                     | Dual Harmonic            |      |       |       |

**Supplemental Figure 1** 

Supplemental Figure 1. Baseline differences in cytokine and chemokine expression between individuals. Individual data are shown from each participant as unadjusted or after Z-score and percentage-of-mean transformations. One-way mixed model analysis showed significant differences between participates in unadjusted cytokine and chemokine levels, independent of LPS dose. These differences were not significant (p=n.s.) when analyzed using Z-score and percentage-of-mean transformed data.

**Supplemental Figure 2** 

Supplemental Figure 2. Cytokine and chemokine expression dose response to LPS stimulation. Individual data are shown from each participant as unadjusted or after Z-score and percentage-of-mean transformations. One-way mixed model analysis showed significant differences between doses in unadjusted cytokine and chemokine levels. These differences were not significant (p=n.s.) when analyzed using Z-score and percentage-of-mean transformed data.

Supplemental Figure 3

Supplemental Figure 3. Daily baseline and circadian rhythms in innate immune response in the subset of samples treated with the same dose. Group data mean  $\pm$  SEM (left panel) and group-mean fitted cosinor functions under baseline conditions with standard sleep-wake schedules (dashed lines) and constant conditions (solid lines) of MCP-1, GM-CSF, IL-8 and TNF- $\alpha$ . Non-significant regression fits are marked in gray lines. Hashed gray bars represent group mean scheduled sleep times. Throughout the constant routine participants remained awake.
