

Supplemental Figure 3. Effect of sActRIIB-Fc on EMG recordings of *mdx* mice.

Examples of spontaneous potentials recorded under anesthesia in *triceps brachialis* muscle of *mdx* mice. The upper trace was recorded in a PBS treated mouse, the lower trace in a sActRIIB-Fc treated mouse. Both traces show complex repetitive discharges (sensitivity, 200 μ V/division upper trace, 50 μ V/division lower trace, sweep speed, 10 ms/division).
