Supplemental Table 4. p-Values Comparing Stimulated Macrophage Cytokine Expression.

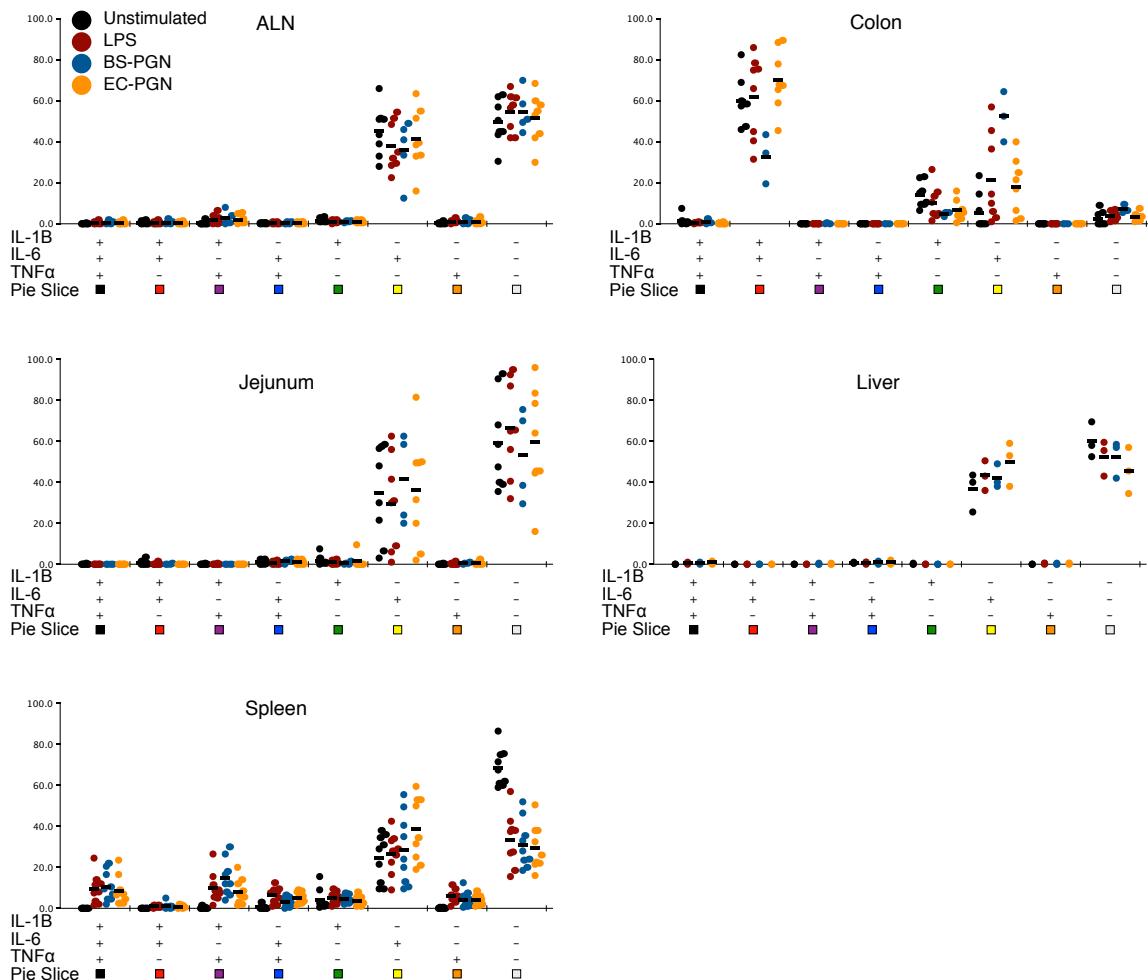

A. p-Values comparing the absolute percent of any cytokine (IL-1 β , IL-6 or TNF α) expression among similar stimulation conditions, between macrophages from disparate tissues as shown in Figure 3D. Significance assessed by unpaired, two-tailed t-test. **B.** p-Values comparing the absolute percent of any cytokine expression among similar tissue macrophages, between different stimuli. Significance assessed by paired, two-tailed t-test.

All Macrophages (Unstimulated)

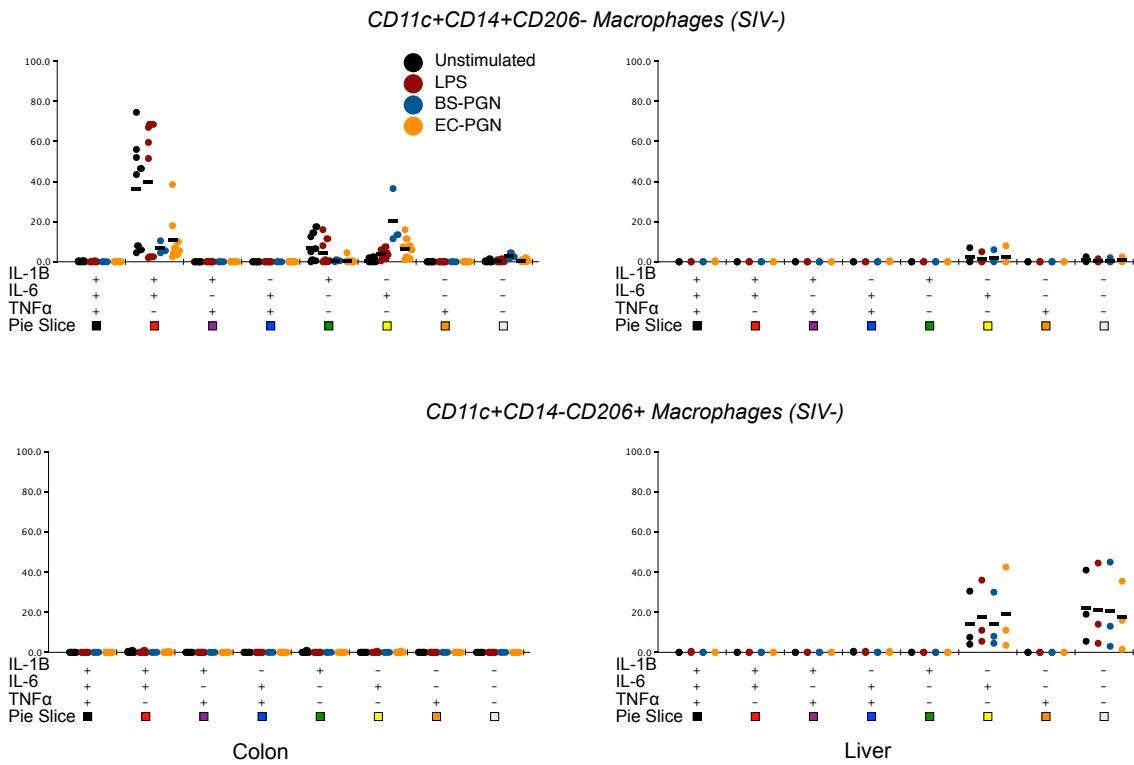

Supplementary Figure 1 – Absolute values of phenotypic subsets among unstimulated, bulk macrophages from SIV-uninfected animals. Absolute percent of unstimulated macrophages from SIV-uninfected (black circles) and SIV-infected (red circles) animals expressing the indicated phenotype, in reference to relative expression pie charts as shown in Figure 2B. Line represents mean of population.

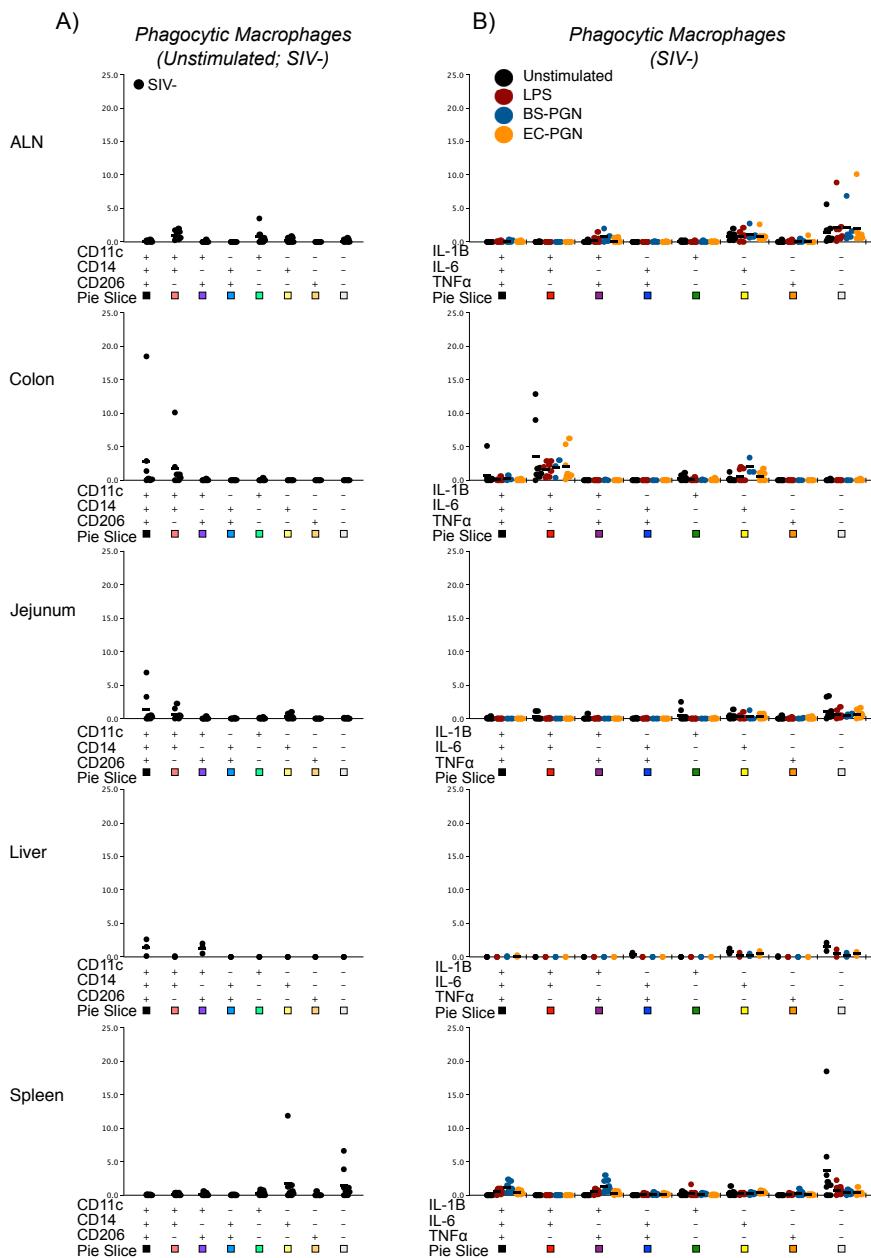

All Macrophages (SIV-)

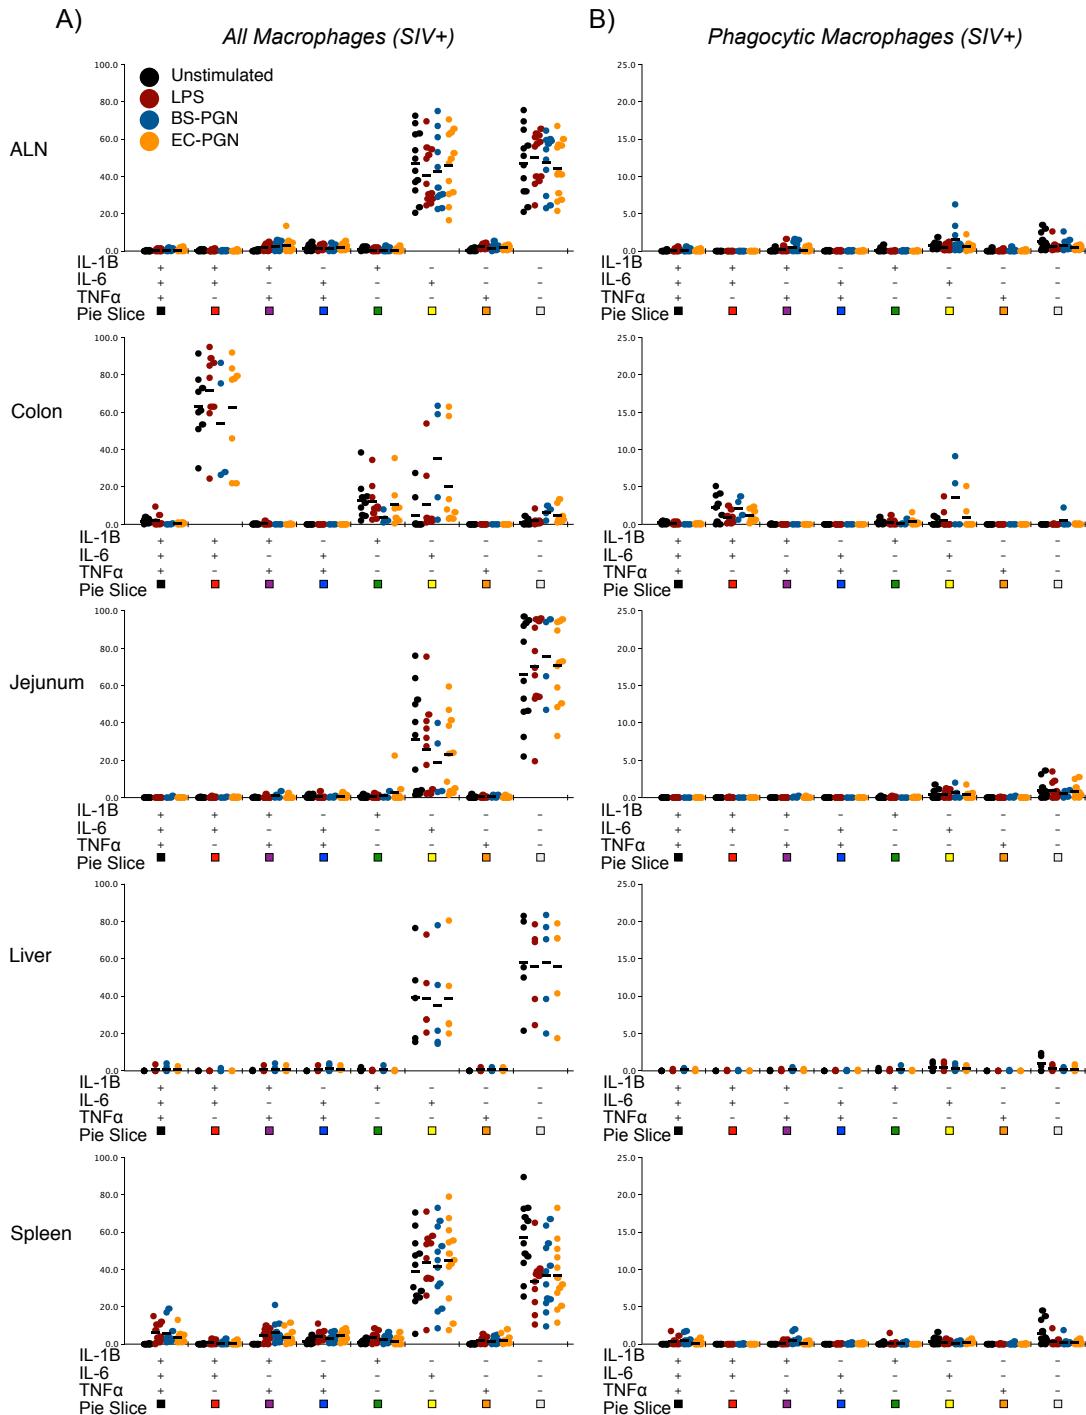

Supplementary Figure 2 – Absolute values of functional subsets among stimulated, bulk macrophages from SIV-uninfected animals. Absolute percent of unstimulated (black circles), LPS-stimulated (red circles), BS-PGN stimulated (blue circles) or EC-PGN stimulated (orange circles) macrophages from SIV-uninfected animals expressing the indicated cytokine profile, in reference to relative expression pie charts as shown in Figure 3E. Line represents mean of population.

Supplementary Figure 3 - Absolute values of functional subsets among stimulated, subset macrophages from SIV-uninfected animals. Absolute percent CD11c+CD14+CD206- (top) or CD11c+CD14-CD206+ (bottom) unstimulated (black circles), LPS-stimulated (red circles), BS-PGN stimulated (blue circles) or EC-PGN stimulated (orange circles) macrophages expressing the indicated cytokine profile of total macrophages from SIV-uninfected animals, in reference to relative expression pie charts as shown in Figure 4. Line represents mean of population.

Supplementary Figure 4 – Absolute values of phenotypic and functional subsets among stimulated, phagocytic macrophages from SIV-uninfected animals. A. Absolute percent unstimulated, phagocytic macrophages expressing the indicated phenotype of total macrophages from SIV-uninfected (black circles) animals, in reference to relative expression pie charts as shown in Figure 5B. B. Absolute percent unstimulated (black circles), LPS-stimulated (red circles), BS-PGN stimulated (blue circles) or EC-PGN stimulated (orange circles) phagocytic macrophages expressing the indicated cytokine profile of total macrophages from SIV-uninfected animals, in reference to relative expression pie charts as shown in Figure 5C. Line represents mean of population.

Supplementary Figure 5 - Absolute values of functional subsets among stimulated, bulk and phagocytic macrophages from SIV-infected animals.
 Absolute percent unstimulated (black circles), LPS-stimulated (red circles), BS-PGN stimulated (blue circles) or EC-PGN stimulated (orange circles) macrophages (A) or phagocytic macrophages (B) expressing the indicated cytokine profile of total macrophages from SIV-infected animals, in reference to relative expression pie charts as shown in Figures 6A and B, respectively. Line represents mean of population.
