

**Supplemental Data Figure S1.** Correlations between the result of anti-*Toxocara canis* IgG ELISA and the eosinophil counts or duration of eosinophilia. The positive correlations were observed between the optical density levels of IgG anti-*Toxocara canis* antibody analyzed by ELISA and eosinophil counts ( $r=0.234$ ,  $P<0.001$ ) (A) or the duration of eosinophilia ( $r=0.155$ ,  $P=0.019$ ) (B).
