angiogenesis
anti−apoptosis
response to hyperoxia
response to hypoxia
positive regulation of angiogenesis
cellular response to lipopolysaccharide
response to progesterone stimulus
negative regulation of caspase activity
positive regulation of cell migration
positive regulation of transcription from RNA polymerase II promoter
negative regulation of apoptosis
response to lipopolysaccharide
osteoclast differentiation
response to organic cyclic compound
response to cytokine stimulus
positive regulation of cellular protein metabolic process
transforming growth factor beta receptor signaling pathway
interferon−gamma−mediated signaling pathway
negative regulation of mitotic cell cycle
response to estradiol stimulus
