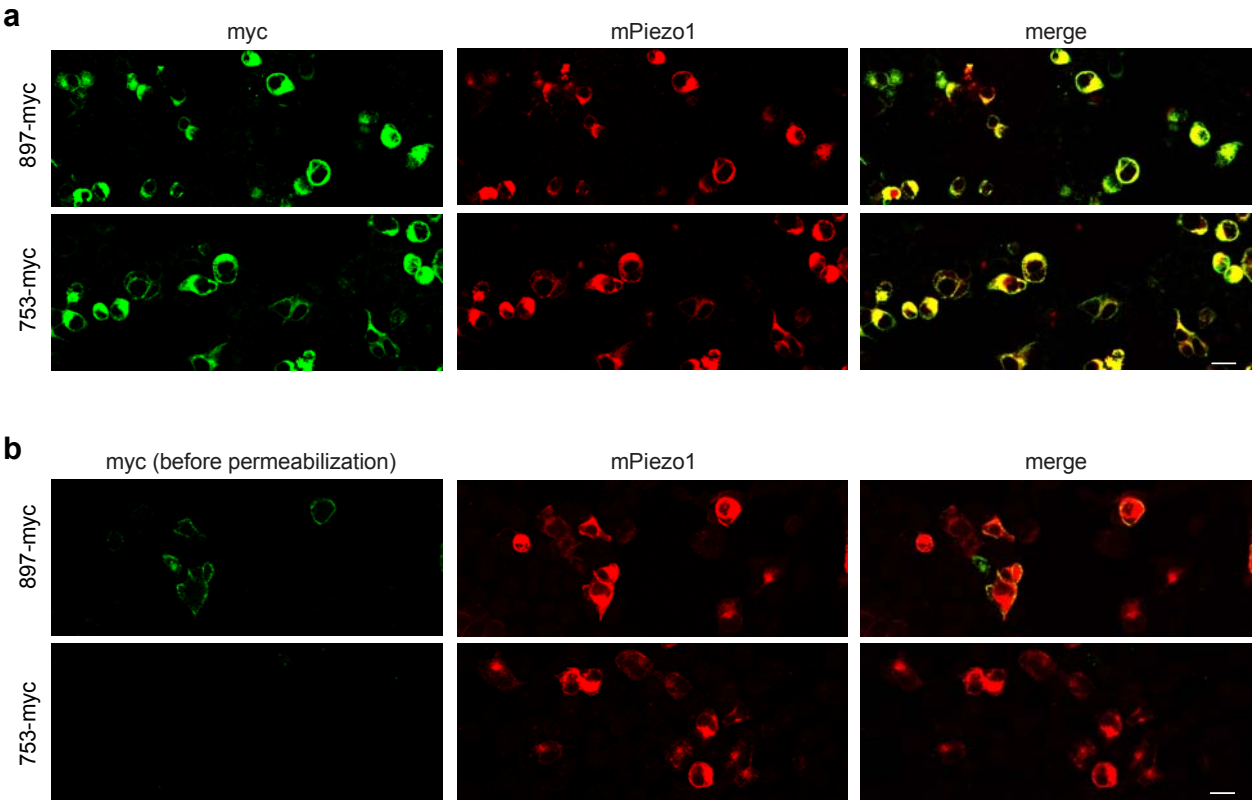
Supplemental Figures and Legends



Supplementary Figure 1. Staining of mPiezo1-myc constructs using mPiezo1 antibody as a control of myc-tag localization experiments. (**a**) Representative images of labeling using a myc antibody (green, left panels) and mPiezo1 antibody (red, middle panels) in mPiezo1-myc transfected cells. Myc tags were inserted at position 897 or 753, as specified. Staining using myc- and mPiezo1-antibodies overlap (right panels), illustrating that the position of myc-tag insertion does not affect their accessibility. (**b**) Same as (**a**) except that myc staining was performed before permeabilization. The level of expression of both mPiezo1-myc constructs evaluated by mPiezo1 labelling is similar illustrating that lack of myc staining of 753-myc constructs under these conditions is not due to lower expression. Scale bar: 20 μm. Note that Myc labelling images in panel (**a**) and (**b**) are the same used in Fig1a, left and right panels, respectively.

Supplementary Figure 2. Myc staining and functionality data of mPiezo1 myc-tag constructs. (**a**) Representative images of non-permeabilized and permeabilized staining using a myc antibody (red) in mPiezo1-myc iresGFP transfected cells. scale bar 20 μm. Note that extracellular myc detection signal of 2071- and 2075-myc constructs is weaker than for other constructs positively stained by anti-myc without permeabilization. This could reflect impaired membrane trafficking for these two constructs. (**b**) Bar graph representing MA whole-cell I_{max} currents recorded from cells transfected with GFP only, mPiezo1, or mPiezo1 with a myc tag at the following amino acid positions N-terminal, 102, 304, 508, 669, 897, 1071, 1765, 2071, 2075, 2336 and C-terminal (n= 9, 5, 4, 5, 6, 5, 5, 7, 7, 4, 5, 8, 9 and 5, respectively).

Supplementary Figure 3. Alignment between mouse, human and fly Piezos highlights hydrophobic regions and residues of interest. Multiple sequence alignment between mPiezo1, mPiezo2, hPiezo1, hPiezo2 and dPiezo generated using ClustalW2 (http://www.ebi.ac.uk/Tools/msa/clustalw2/). Residues highlighted in grey indicate proposed hydrophobic regions in mPiezo1. Residues highlighted in cyan indicate position of myc-tags in extracellular loops. Residues highlighted in pink indicate phosphorylation sites. Residues highlighted in green indicate junction points for the following mPiezo1/dPiezo chimeras; ASRG: $dP^{1\text{-}1316}/mP1^{1316\text{-}2547}$ and $mP1^{1\text{-}1315}/dP^{1317\text{-}2548}$, FLW: $dP^{1\text{-}1752}/mP1^{1715\text{-}2547}$ and $mP1^{1\text{-}1714}/dP^{1753\text{-}2548}$ and TDV: $dP^{1\text{-}1929}/mP1^{1974\text{-}2547}$ and $mP1^{1\text{-}1973}/dP^{1930\text{-}2548}$. Residues highlighted in yellow indicate acidic residues between regions of amino acid numbers 1974-2547 that were mutated to alanine or asparagine.

Supplementary Figure 4. Conservation of a glutamic acid residue involved in ion conduction properties of Piezo channels. Multiple sequence alignment of Piezo proteins from different species using Clustal Omega (http://www.ebi.ac.uk/Tools/msa/clustalo/). Alignment of only the region around mouse Piezo1 E2133 (red box) is shown. The yellow boxes highlight conserved residues among species close to mouse Piezo1 E2133. The sequences used for the alignment are:

Homo sapiens: HsPiezo1 (NP_001136336.2) and HsPiezo2 (NP_071351.2)

Mus musculus: MmPiezo1 (ADN28064.1) and MmPiezo2 (NP_001034574.4)

Danio rerio: DrPiezo1 (XP_696355.4) and DrPiezo2 (XP_003198010.2)

Python bivittatus: PbPiezo1 (XP_007431683.1) and PbPiezo2 (XP_007433600.1)

Manacus vitellinus: MvPiezo1 (XP_008925897.1) and MvPiezo2 (XP_008923830.1)

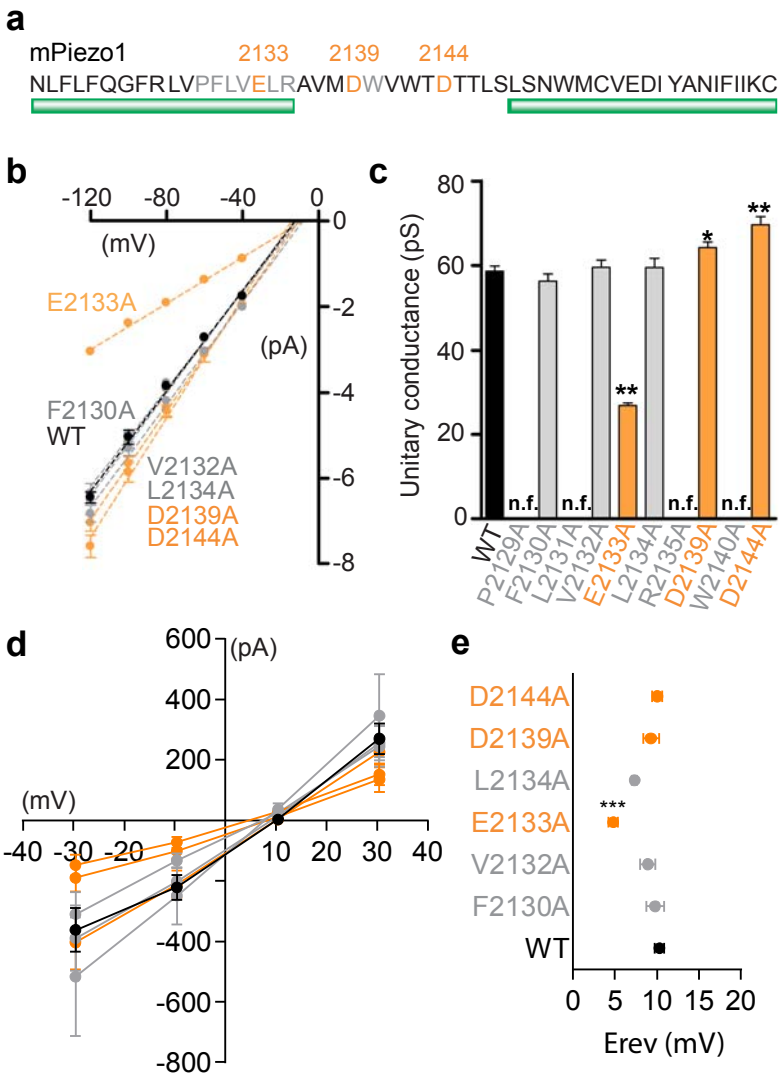
Drosophila melanogaster: DmPiezo (AFB77909.1)

Cupiennius salei: CsPiezo (JAA92956.1)

Galdieria sulphuraria: GsPiezo (XP_005703632.1)

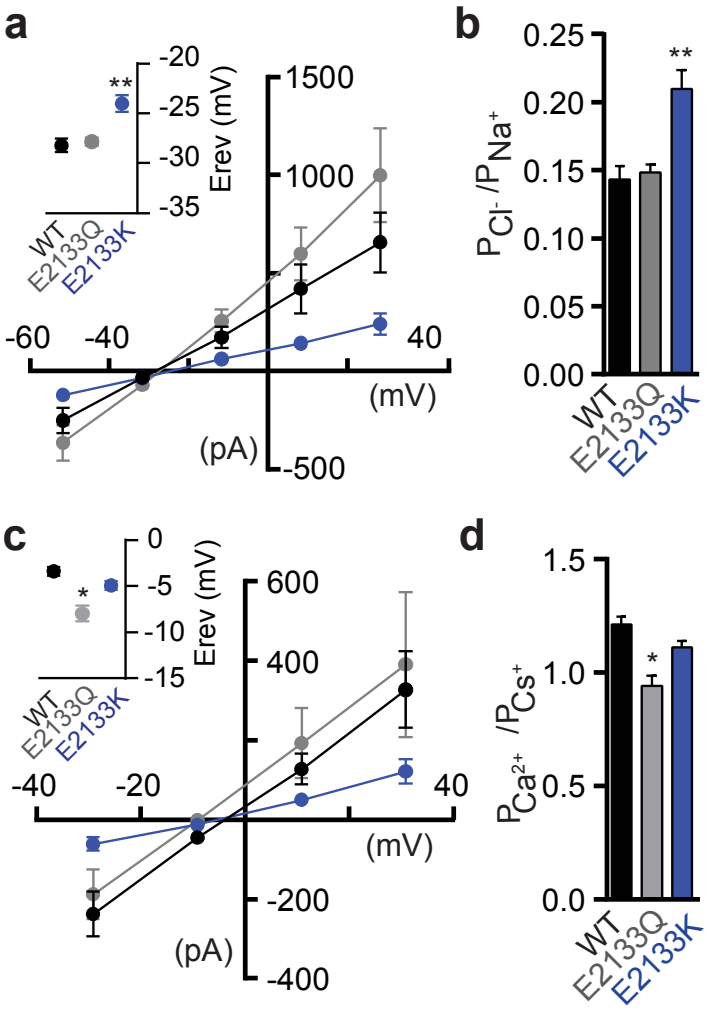
Arabidopsis thaliana: AtPiezo (NP_182327.6)

Dictyostelium discoideum: DdPiezo (Q54S52.1)



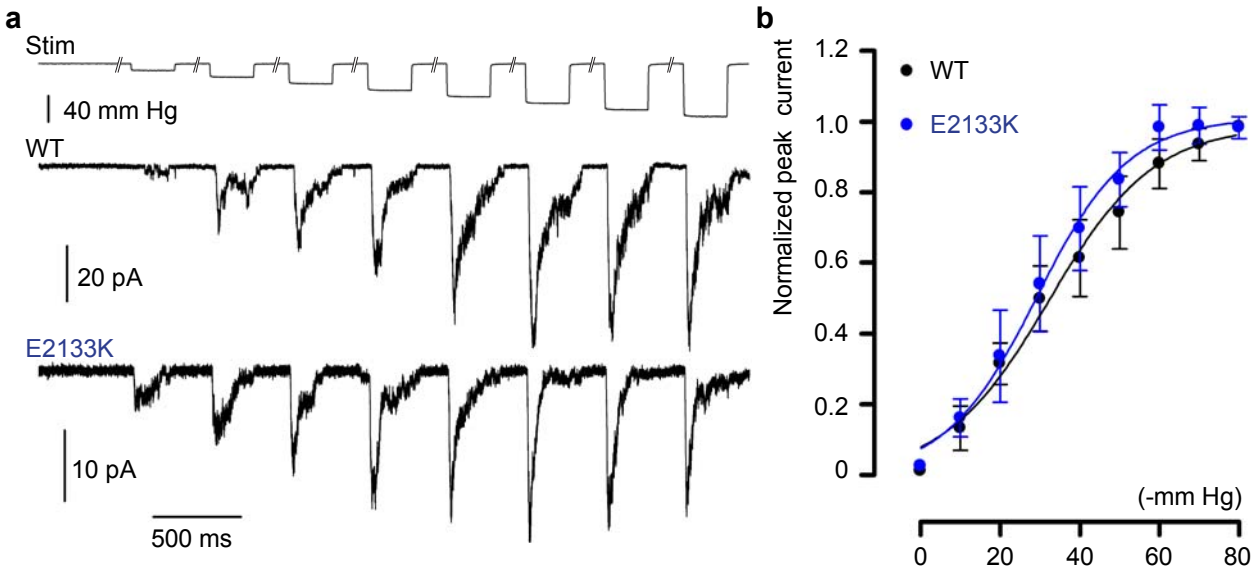
Supplementary Figure 5. Unitary conductance and ion selectivity of alanine single point mutants around E2133. (**a**) mPiezo1 sequence around E2133. Green bars indicate hydrophobic regions. E2133 and other acidic residues are highlighted in orange. Other conserved residues in this region are marked in grey. (**b**) Average I-V relationships of stretch-activated single channels in mPiezo1 WT and F2130A, V2132A, E2133A, L2134A, D2139A and D2144A transfected cells (n =7, 6, 4, 4, 5, 7, and 4, respectively; mean ± s.e.m.). Single-channel amplitude was determined as the amplitude difference in Gaussian fits of full-trace histograms. (**c**) Unitary conductance of stretch-activated channels from mPiezo1 WT and specified single point mutants transfected cells. P2129A, L2131A, R2135A and W2140A mutants are non-

functional. Conductance is calculated from the slope of linear regression line of individual cell single-channel I-V relationships (mean ± s.e.m.; One-way ANOVA with Dunn's comparison relative to WT, **P<0.01, *P<0.05). Panel b and c experiments were done in Na^+-based pipette solution. (**d**) Average I-V relationships of MA currents recorded from mPiezo1 WT, F2130A, V2132A, E2133A, L2134A, D2139A and D2144A expressing cells with 150 mM CsCl based intracellular solution and 100 mM $CaCl_2$ extracellular solution (n = 9, 5, 6, 9, 5, 7 and 7, respectively). (**e**) E_{rev} potential for the indicated mutants corresponding to panel (**d**) experiments WT: 10.3 ± 0.6 mV; F2130A: 9.8 ± 1.0 mV; V2132A: 8.9 ± 0.9 mV; E2133A: 4.8 ± 0.6 mV; L2134A: 7.3 ± 0.3 mV; D2139A: 9.3 ± 0.9 mV; D2144A: 10.0 ± 0.6 mV; mean ± s.e.m.; One-way ANOVA with Dunn's comparison to WT ***P<0.001).

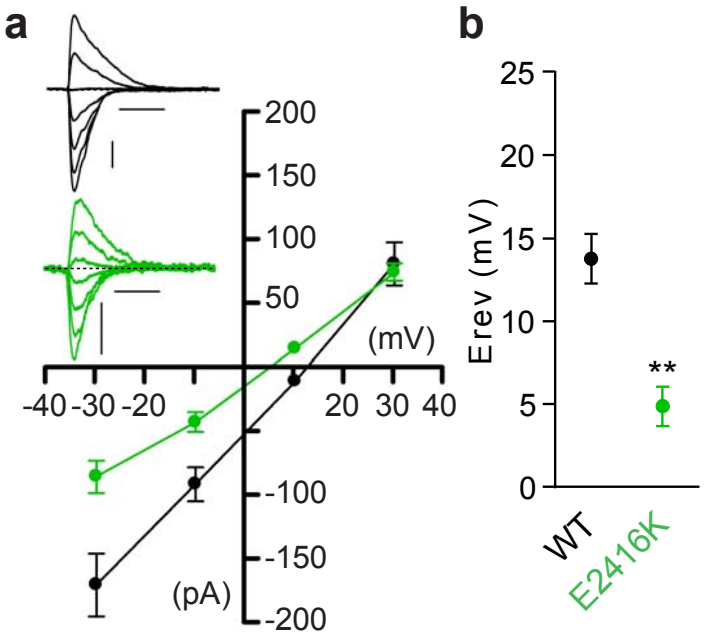


Supplementary Figure 6. Chloride and Calcium permeability for E2133 mutants. (**a**) Average I-V relationships of MA currents recorded from mPiezo1 WT, E2133Q and E2133K expressing cells with 150 mM NaCl based intracellular solution and 30 mM NaCl extracellular solution. Inset: Average reversal potential (mean ± s.e.m.; n = 6, 7 and 6, respectively; One-way ANOVA with Dunn's comparison to WT **P<0.01). (**b**) P_{Cl}/P_{Na} permeability ratios of MA currents from cells transfected with mPiezo1 WT, E2133Q and E2133K (mean ± s.e.m.; n = 6, 7 and 6, respectively; One-way ANOVA with Dunn's comparison to WT **P<0.01). (**c**) Average I-V relationships of MA currents recorded from mPiezo1 WT, E2133Q, and E2133K expressing cells with 149 mM Cs-methanesulfonate, 1 mM CsCl based intracellular solution and 50 mM Ca-Gluconate, 0.5 $CaCl_2$ based extracellular solution. Inset: Average reversal potential (mean ±

s.e.m.; n = 6, 6, and 5, respectively; One-way ANOVA with Dunn's comparison to WT *P<0.05). (**d**) P_{Ca}/P_{Cs} permeability ratios of MA currents from cells transfected with mPiezo1 WT, E2133Q, and E2133K (mean ± s.e.m.; n = 6, 6, and 5, respectively; One-way ANOVA with Dunn's comparison to WT *P<0.05).



Supplementary Figure 7. Pressure sensitivity for WT and E2133K mutant. (**a**) Representative cell-attached stretch activated current traces recorded from HEK293T cells expressing WT or E2133K mPiezo1 at -80 mV with standard pipette solution (see methods). Patches are stimulated with 250-ms negative pressure pulses from 0 to -80 mmHg elicited every 10 seconds (-10 mm Hg increments). (**b**) Average peak current-pressure relationships of stretch activated currents recorded from WT or E2133K mPiezo1 expressing cells as illustrated in (**a**) (n =4 and 5 cells, respectively). Bars indicate mean ± s.e.m. Fits with boltzman equation give pressure for half maximal activation (P_{50}) of 32.3 ± 3.0 and 29.3 ± 2.9 mm Hg for WT and E2133K, respectively.



Supplementary Figure 8. Ion selectivity altered by mPiezo2 mutant. (**a**) Average I-V relationships of MA currents recorded from mPiezo2 WT and E2416K expressing cells with 150 mM CsCl based intracellular solution and 100 mM $CaCl_2$ extracellular solution (n = 6 for each). Inset: typical recording traces for WT (black) and E2416K (green) from -69.6 to +50.4 mV, Δ20 mV. Scale bars: 100 pA, 50 ms. Probe stimulation displacements are 5 and 9 μm, respectively. (**b**) Average reversal potentials from individual cells corresponding to panel (**a**) experiments (mean ± s.e.m.; Mann-Whitney test, **P<0.01).
