

Extreme heat changes post-heatwave community reassembly

Running head: Extreme heat alters community recovery

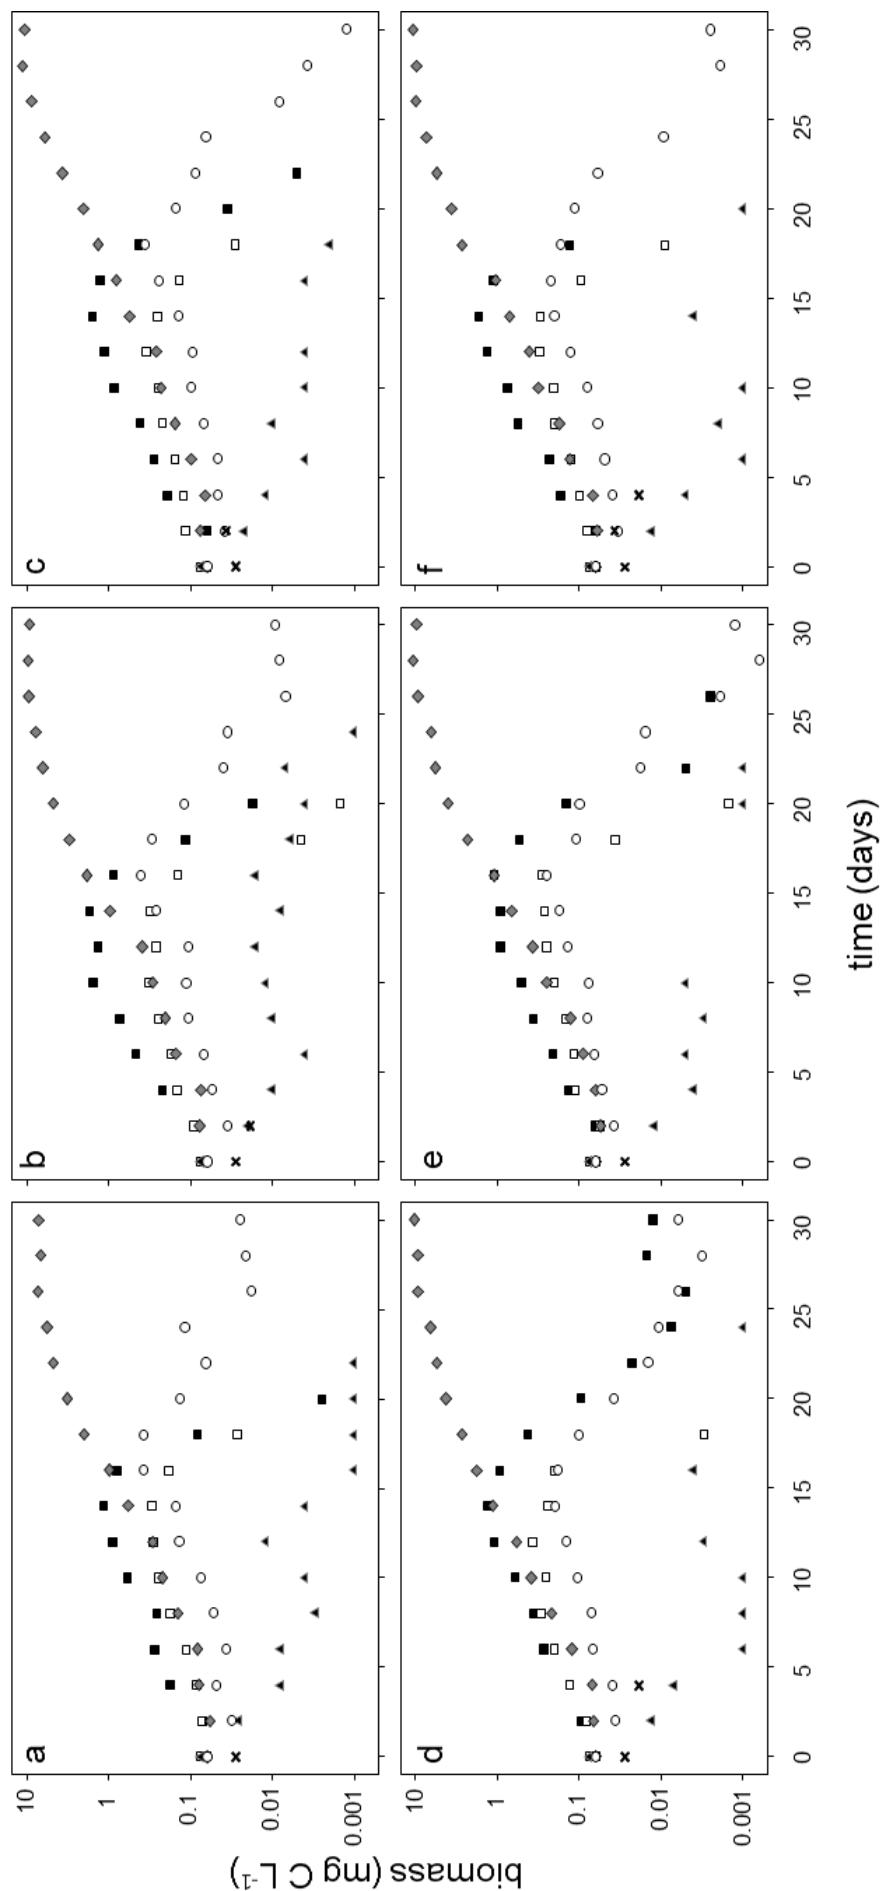

Fig. S1: Control rotifer communities at 15°C. Replicates a – f. Mean biomass ($\pm \text{SE}$) are expressed in mg C L^{-1} . Species are *Brachionus calyciflorus* (closed squares), *B. havaensis* (open squares), *Cephalodella* (grey diamonds), *Keratella* (open circles), *Lecane* (grey triangles) and *Asplanchna* (crosses).

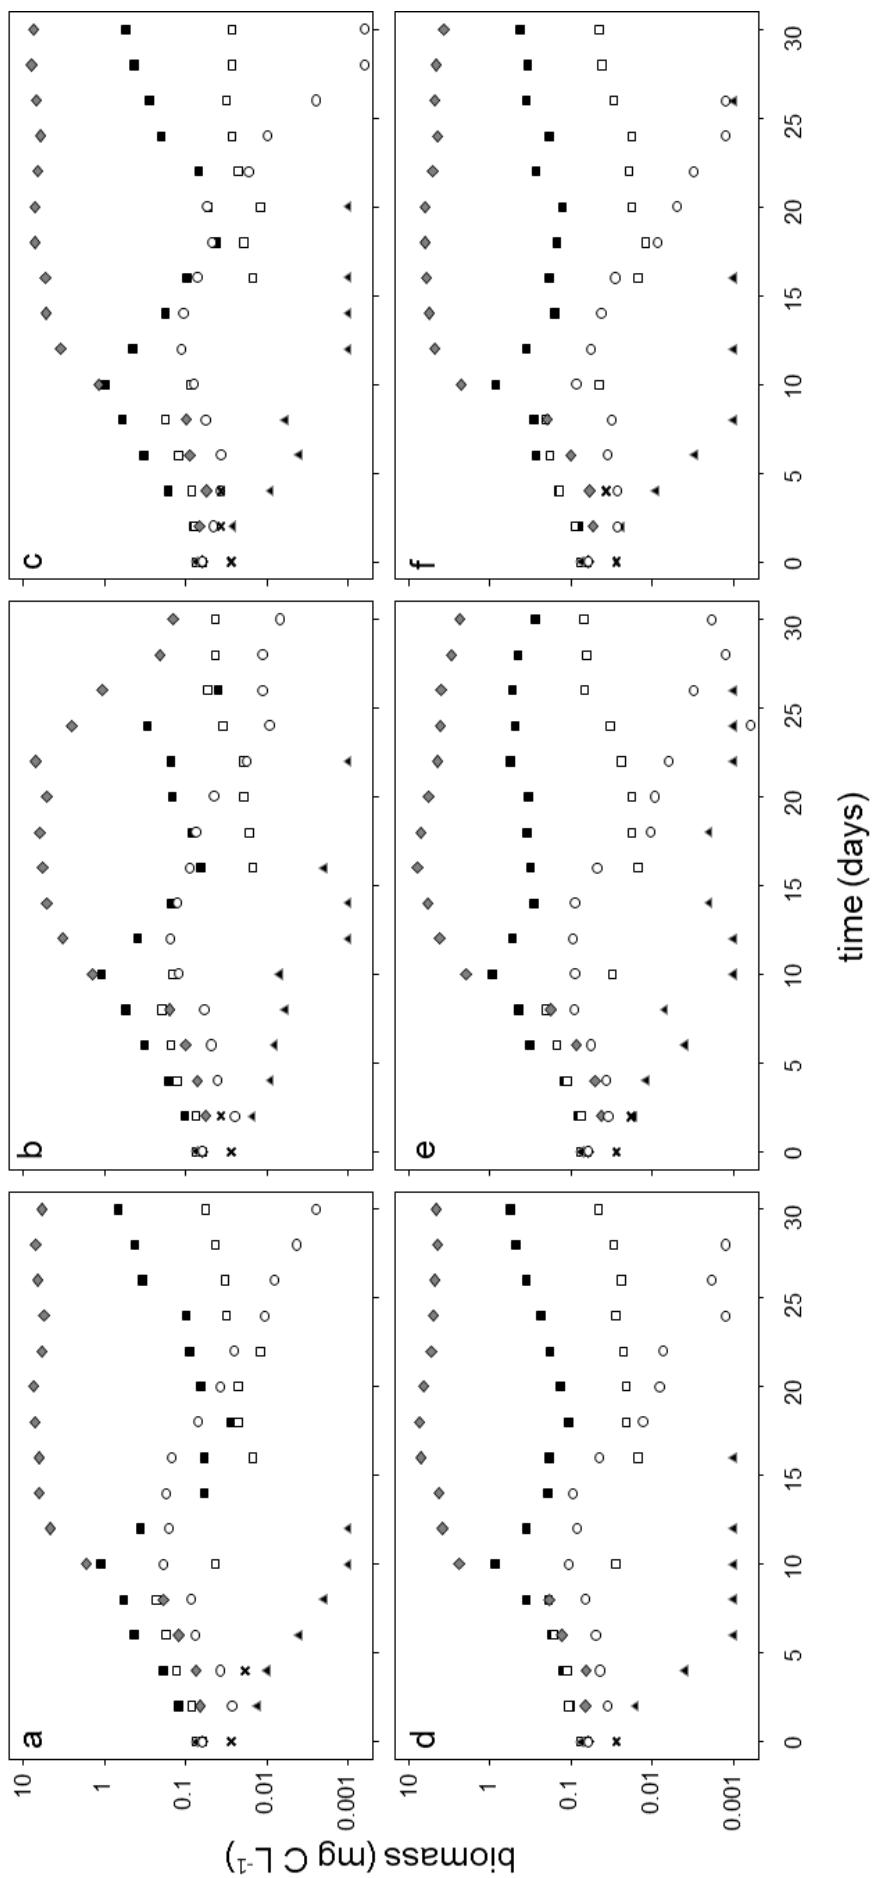

Fig. S2: Rotifer communities of the 29°C heat wave treatment. Replicates a – f. Heat waves started at day 8 and ended at day 10. Lost species were re-introduced at day 16. Mean biomass (\pm SE) are expressed in mg C L^{-1} . Species are *Brachionus calyciflorus* (closed squares), *B. havanaensis* (open squares), *Cephalodella* (grey diamonds), *Lecane* (open circles), *Keratella* (grey triangles), and *Asplanchna* (crosses).

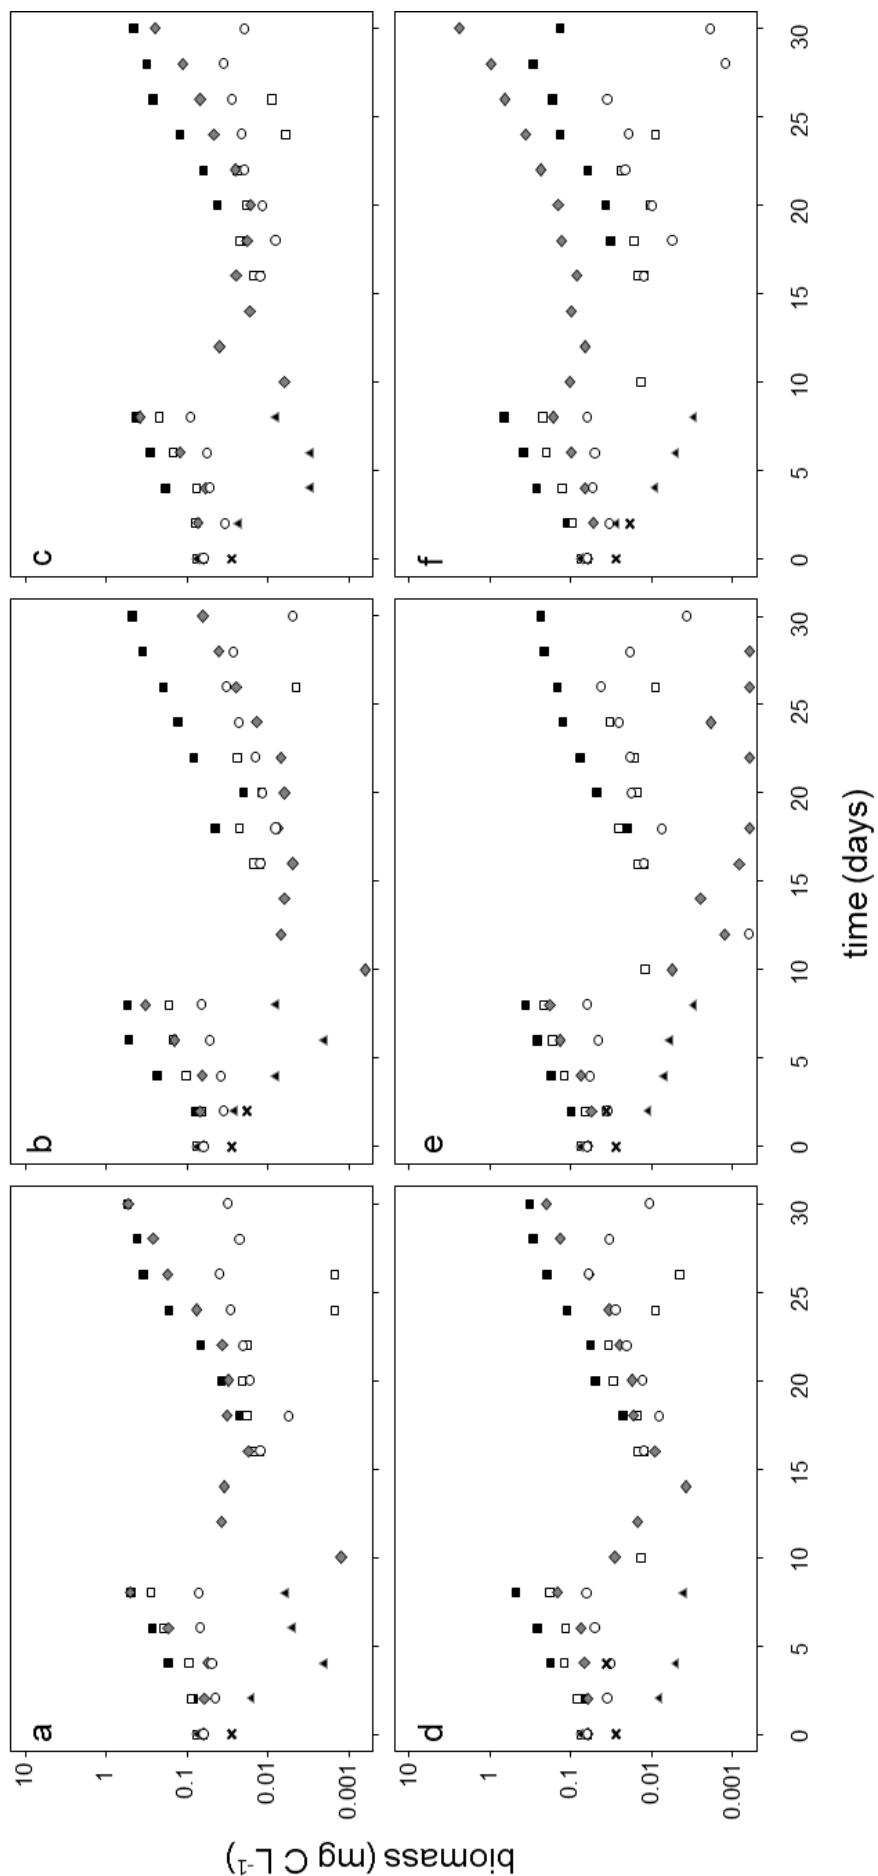

Fig. S3: Rotifer communities of the 39°C heat wave treatment. Replicates a – f. Heat waves started at day 8 and ended at day 10. Lost species were re-introduced at day 16. Mean biomass (\pm SE) are expressed mg C L⁻¹. Species are *Brachionus calyciflorus* (closed squares), *B. havanaensis* (open squares), *Cephalodella* (grey diamonds), *Keratella* (open circles), *Lecane* (grey triangles) and *Asplanchna* (crosses).

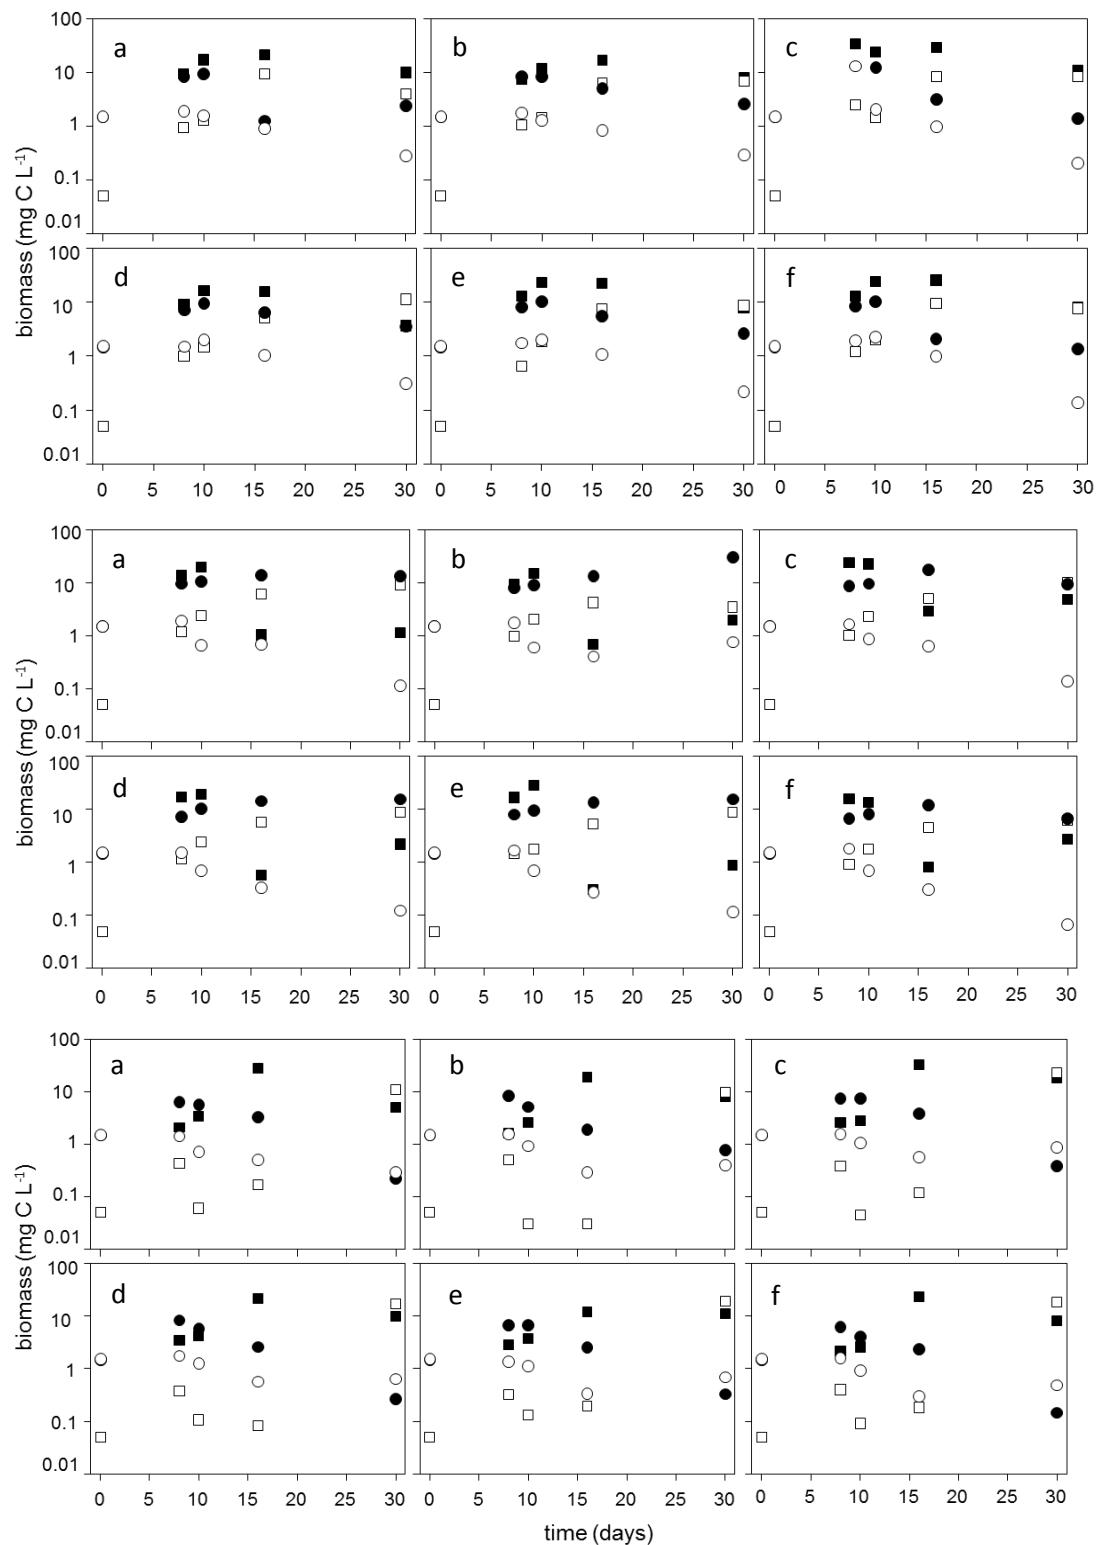

Fig. S4: Algal communities of (top) the control, (middle) the 29°C heat wave and the (bottom) 39°C heat wave treatment. Replicates a – f. Heat waves started at day 8 and ended at day 10. Species are *Monoraphidium* (closed circles), *Nannochloropsis* (open circles), *Chlamydomonas* (closed squares), Chrysophyte (open squares).
