

S2 Fig. Biomass of the two most abundant herbivorous fishes in the Atoll, *Acanthurus chirurgus* and *A. coeruleus*, between closed and open pools. (*) indicate significant differences in the means between habitats (t-test for *A. chirurgus*: $t=7.02$, $p<0.001$; t-test for *A. coeruleus*: $t= 2.16$, $p<0.05$). Error bars represent standard error of the mean.
