

SUPPLEMENTARY FIGURES AND TABLES

Supplementary Figure 1: qRT-PCR and western blot were performed to determine the expression level of VDR after transfection of sh-VDR.

Supplementary Figure 2: miR-145 inhibits GC AGS cell growth *in vitro*. (A–B) The effects of miR-145 on AGS cell viability were determined by MTT assay at 24, 48 and 72 h after transfection with miR-145 over-expression construct or miR-145 inhibitor, with empty vector or ASO-NC, respectively. (C–D) Representative micrographs of crystal violet-stained cell colonies were analyzed by colony formation assay at day 12 after transfection. (E–F) Histogram indicated the percentage of cells in G₁, S and G₂ phases after transfection for 48 h based on the flow-cytometric analysis. Data were presented as mean \pm SEM. (* $p < 0.05$; ** $p < 0.01$).
