

Supplementary Data

SUPPLEMENTARY FIG. S1. IFN pretreatment in combination with WY-14643 reduces HCV replication. JFH1-infected Huh-7 cells were mock treated or treated with 2 U/mL IFN- α \pm WY-14643 for 3 weeks, followed by 20 U/mL IFN- α . IFN- α pretreatment significantly reduced JFH1 replication at all time points compared with the mock-treated control. The addition of WY-14643 to IFN- α pretreatment significantly reduced HCV RNA copies 24 h posttreatment with 20 U/mL IFN- α (* P < 0.05; ** P < 0.01).
