

**Table S1** List of proteins induced by serotonin in *C. elegans* that were identified by hierarchical clustering of fraction labeled values. Relationships of proteins within these groups were explored by KEGG pathways analysis. (A) Proteins in which the increase in fraction labeled were highest. (B) Proteins in which the increase in fraction labeled were lower. Genes in bold extend lifespan when suppressed by RNAi and thus are likely to be age-promoting when highly expressed.

**Table S1A.** Highest Fraction Labeled
