

Figure S1 Comparison of Body Size and Growth Rate of Worms Grown in Liquid Versus Solid Media. Data are representative of three independent experiments. $N_{\text{worms}} > 20$ for each condition and all time points except at 0 hrs. For data at 0 hrs starved synchronized worms ($N_{\text{worms}} = 5$) were measured prior to plating in liquid or NGM. *** $P < 0.001$, * $P < 0.05$, Two-way ANOVA with Bonferroni post-hoc test.
