

Supplementary information, Figure S11 Correlation between HLP1 binding and differential gene expression.

The volcano plots show both down-regulated (green dots) and up-regulated genes (blue dots) in the *hlp1-1* mutants. Those differentially expressed genes with HLP1 binding are indicated by red dots. The ratio of expression levels of *hlp1-1* over Col ($\text{RPKM}_{hlp1-1}/\text{RPKM}_{\text{Col}}$ in \log_2 scale, x -axis) is plotted against the P value (\log_{10} scale, y -axis).
