

Supplementary information, Figure S2 The RRM1 and RRM2 of HLP1 are required but insufficient for promoting floral transition.

GFP-HLP1, *GFP-HLP1 Δ RRM* and *GFP-RRM* constructs driven by the *35S* promoter were transformed into the *hlp1-1* mutants, respectively. Flowering time was assessed by counting total leaf number of the indicated strains (upper panel). *FLC* transcription levels were determined by RT-qPCR (lower panel).
