## **Supplemental Figure Legends**

### **Supplemental Figure 1: Effects of early overexpression in a second independently targeted iPKD2**

**ESC line.** The generation of this second iPKD2 cell line was performed according to **Figure 2A.**

Cultures were stimulated as illustrated in **Figure 3A.** Expression levels of **(A)** FoxA2, **(B)** Pax6, **(C)** Flk1, **(D)** cKit, **(E)** Isl1 and **(F)** Tbx5 on day 4 of embryoid body differentiation are shown. Supplemental Experiments were performed n=2.

### **Supplemental Figure 2: Differentiation of PKD2-kinase dead EBs derived from a second iPSC clone.**

These data were generated from two clones (WT and KD) further expanded after picking from reprogramming MEF cultures from the same genotype. Regulation of **(A)** FoxA2, **(B)** Pax6, **(C)** Pdgfr, **(D)** cKit, **(E)** Isl1 and **(F)** Tbx5 on day 4 of differentiation is shown. EB differentiation was performed according to **Figure 6A.** KD: kinase dead, WT: wild type. Supplemental Experiments were performed n=2.

## **Supplemental Table 1**

List of adjusted p-values for Figure 3
