

SUPPLEMENTARY FIG. S2. Fibrotic changes in the IC bladder. (A) Masson's trichrome staining in the indicated bladder tissues (magnification $\times 200$). (B) Fold change of the area stained with Masson's trichrome is depicted as the mean \pm SEM ($n \geq 5$; $P < 0.01$ in comparison with IC group bladders, one-way ANOVA with Bonferroni post-test).
