

SUPPLEMENTARY FIG. S5. Fluorescent immunostaining of non-phospho β -catenin protein (*green*) at 1 week after the injection of PKH26-labeled UCB-MSCs (*red*) in the absence or presence of inhibitors (magnification $\times 400$). Nuclei were stained with DAPI (*blue*). *Arrows* indicated positively stained regions. DAPI, 4',6-diamino-2-phenylindole; Gef, Gefitinib; Indo, indomethacin; UCB-MSC, umbilical cord-blood derived mesenchymal stem cell. Scale bar = 20 μ m.
