Figure S1. Genomic view of RDV vsiRNAs from RDV-infected rice plants. The vsiRNAs per million of the total sequenced small RNAs were plotted against the (+)-(top) or (-)-(bottom) strands of RDV genomic RNAs (S1-S12) using a single-nucleotide window.

Figure S2. Southern blot assay of *OsRDR6*-over-expression lines. Probes were amplified with the Hyg-specific primers Hyg-F/R (Table S1) which are specific to hygromycin-resistance gene, hygromycin phosphotransferase (Hyg) and labeled by DIG DNA labeling mix. Except line 9, other five transgenic lines are single copy T-DNA inserted. WT, Zhonghua 11 wild type rice; EV empty vector transformed Zhonghua 11; OsRDR6 OE, *OsRDR6*-over-expression lines; M, DNA marker.

Figure S3. RT-PCR screening of transgenic *A. thaliana* lines. **(a)** Detection of *OsRDR6* transcript expression in transgenic *rdr6* *A. thaliana* (*rdr6-11*) lines over-expressing *OsRDR6*. Lines 14 and 15 are two independent lines. **(b)** Detection of *OsRDR2* transcript expression in transgenic *rdr6* *A. thaliana* (*rdr6-11*) lines over-expressing *OsRDR2*. Lines 11 and 22 are two independent lines. **(c)** Detection of *AtRDR6* transcript expression in transgenic *rdr6* *A. thaliana* (*rdr6-11*) lines over-expressing *AtRDR6*. Lines 1 and 8 are two independent lines. WT, Columbia (Col) wild type *A. thaliana* plants. EV, *A. thaliana* plant lines transformed with pWM101 plasmid vector. +RT, the RNA sample treated with reverse transcriptase. -RT, the RNA sample that did not treated with reverse transcriptase for exclusion of the possibility of genomic DNA contamination. *AteIF4A* was used as an internal control.
