

FIG S1 XBP1 enhances MRSA killing by macrophages. (A) XBP1 and ACTIN immunoblots of cell lysate from transiently transfected RAW264.7 cells with NT control or *Xbp1* siRNA, which were infected with MRSA for 8h. **(B)** Percent of MRSA killing by RAW264.7 macrophages when transfected with NT-control or *Xbp1* siRNA. Percent killing is presented as mean of $n \geq 3$ independent experiments \pm SD. * $p < 0.05$, ** $P < 0.01$.
