

S1 Table: Coefficients of the Cox model for the prediction of stroke after atrial fibrillation. TIA: transient ischemic attack.

Predictor	$\beta$
Sex (1=Men, 2=Women)	0.6507
Age, per y	0.0291
Systolic Blood Pressure, per mmHg	0.0061
Diabetes Mellitus	0.5893
Prior Stroke/TIA	0.6316
